

## **No. 829 Footloop**

No. 1 In this Footloop game, you must try to score a goal on a football field with a soccer ball. This means that you do not have to aim at a soccer goal, but at a football goal. In this football goal, there are individual circular discs in different sizes and colors. In the circular discs, there are individual points. Some of the discs that move in this goal are small, medium, large and must be hit with the soccer ball in order to score individual points.

No. 2 Try to get as many points as possible in the remaining playing time to leave the field as the winner. The teams are each made up of 11 online players or computer opponents per team. For example, if you hit a disc with the dots that contains the opponent's logo, the opponent's points will be deducted. The same principle can also happen to you and you will have points taken away from you.

No. 3 You must therefore try to collect enough points in the game so that your opponent cannot deduct points from you when he hits this individual point disc. There are also special balls that are unlocked on the court after a certain time and point setting. These balls have special abilities and can influence the game positively or negatively. Special balls include dynamite balls, fire balls, ice balls, wind balls, bomb balls, water balls, etc. After unlocking them, you can use these balls to hit the special discs in order to get more individual points. Only the special discs can be attacked or destroyed with the special abilities of the special balls in order to get more points.

No. 4 In real time, the levels or the field can also change into a water, desert, stone, grass, mountain, ice landscape, etc. transform

## ***No.831 TheReturnofTheDragon***

No. 1 In this argument reality game, you have to try to find music beats levels and hip hop bars in the free world or in your vicinity or surroundings with your smartphone, to control the digital map, you have a kite that tells you in real time where you are, you control the way with the kite that serves as a motion sensor in your digital map and shows you where you are in the free world

No. 2 You meet other dragons and have to fight them with the skills you have found along the way and in your search. If you win a fight against another player's dragon, you will receive points. These points are essential to charge your digital DJ console.

No. 3 They have a radar that shows you in the real world where the music beats and the hidden hip hop bars in real nature are possibly hiding in front of you, so they have to manage real paths in the wild and follow their search radar, because the hip hop stars have left digital beats and bars from their songs in possible locations near them digitally, for the capture by their smartphone

No. 4 You search and find them, for example, about 3km from your location, if they currently appear on your search radar, move outside and walk or run to this, time-limited location and use your DJ capture desk if you scan the location with your smartphone and a music beat or a hip hop bar appears to capture it if you have collected enough points beforehand, this happens when you aim your finger at the music beat or hip hop bar that appears on your smartphone through the scan with the digital vinyl disc

No. 5 If you have recorded the beat or the hip hop bar with your smartphone or digital DJ console and its vinyl disc and saved it in your box, you will then have to carry out further searches to find more music beats and hip hop bars from international hip hop artists. If you have found some beats and bars and secured your inventory, you can now send these beats and hip hop bars, which have been individually and specially developed for your favorite artists from the international hip hop community, as a zipped file format, to your personal email address and expect that other users of this argument reality game have done the same and hope that the artists will share new scripts in terms of beat creation and lyrics development.

No. 6 Control your digital dragon through distant places and gain new skills that you need in the fight against the other dragons, collect points for your DJ catching desk by winning battles in order to catch hidden beats and hip hop bars that can be found in the real world with your smartphone and send them to interested parties in the international hip hop community

## **No. 833 StiggiHiggi**

No. 1 in this game, I try to hit a vector point of a distant letter with an individual pen, that means I use it like a spear and try to hit the required colored vector point of the far away letter, if I hit all the colored vector points, the letter is activated and I get points for it

No. 2 Next, I have to activate the next letter in order to finally activate the word I am looking for, in order to hit the next words and their letters from the activated and unlocked word in order to move on to the goal, namely to unlock a word passage that is being sought in the game's puzzle.

No. 3 The throws are made more difficult with the individual pens and their colors and sizes, which you have to select specifically for the vector points of the letters in order to activate them when they are hit

No. 4 The word passage you are looking for is then integrated into the puzzle and you try to form a sentence that you are looking for and you get points for it. The person who has formed the correct sentence gets points.

## **No. 834 RowdyRowdy**

No. 1 In this destruction car game, you must first find your Rowdy car from the real world, where the required parts of the car or vehicle are near you, and scan them with your smartphone in order to find the various car parts required for the game and ultimately use these found car parts to build your Rowdy. No. 2 If you have been able to find the required car parts for the construction of your car called Rowdy in the real world and can bring them into the game with your smartphone, this means that you have found them using the radar in your vicinity or surroundings and have scanned them with your smartphone and then integrated them into the game, you can now start creating the car according to your design ideas.

No. 3 After building your car, you start in one of the 27 Mathematical Form Arenas, where you can access power items related to weapon systems, while in the arena you meet other hooligans who, according to the same principle, try to make you incapacitated.

No. 4 You have to destroy a certain number of opposing hooligan cars within a specified time and protect yourself so that you can be switched to the next arena, see Twisted Metal

## **No. 835 PinstillDonkey**

No. 1 In this game, you must try to get Donkey Kong to the top step of the stairs with your controlled elephant, who has to collect colored and individually sized vector points from Donkey Kong, from left to right, from top to bottom, in order to become bigger, stronger and faster in the game, as he is being chased by snakes that are after him. If the snakes grab your elephant, the game is lost. No. 2 For each individual vector point collected, which is sucked up with the elephant's trunk and switched to the correct shape and color with a double tap to pick up the different vector points, you receive points +. If a vector point hits you, for example, small, medium, large, standardized points - are deducted from your point account.

No. 3 DonkeyKong constantly throws new individual vector points onto the stairs, which then start to roll onto your elephant. Use the trunk switch to absorb the correct sizes and colors with the elephant to make it stronger and faster, as mentioned, and collect points + so that the controlled elephant you are moving can run or jump up the stairs faster.

No. 4 As you play the game, the level structure changes in real time to new landscape situations, which means that the level changes in real time to an ice, fire, stone, wind, rain level as you run the Donkey Kong race and you have to make sure that your elegant elephant adapts to the level structures by adding level icons to better and safely master the changed level with your elephant, faster and better by conquering the stairs with him from now on.

No. 5 When you reach the top, you have to challenge Donkey Kong in a race, which means that you have to try to beat him in a race, namely an automatic run, through the level, which consists of barriers and obstacles, by alternately tapping your 4 control buttons, which are used for accelerating, jumping, ducking, hitting, in order to become the king of the stairs.

## **No. 836 WielkiPokui**

No. 1 People gather in a stadium of the future, which is surrounded by an LED colored environment, and pay an individual participant amount, in the amount of their own imagination, to the station owner in order to be able to take part in this game.

No. 2 The participants sit down in the stadium, according to a random principle, on their seats. If all seats are occupied, the stadium entertainer in this case will use a huge smartphone with artificial human intelligence, as well as a full 8k display, a digital rotating carousel, on the display. This rotating carousel randomly selects a participant from the stadium and asks him to come close to him.

No. 3 The participant now starts a round of questions with their smartphone regarding random categories that they can choose from. The other participants in the stadium can send them tips via Swip Messenger in real time to their smartphone, but only tips. The selected participant must prove himself against the smartphone of the future by winning the round of questions, transferring the money per round to the other stadium participants via Swip pay, which he bets per question, in order to challenge the smartphone of the future. This means that the smartphone, which was built by Google, also bets an amount per question that has been answered. The person who answers the question correctly can double the amount of money they have bet or lose the bet until the next question.

No. 4 The question game lasts for a certain period of time and contains a list of questions that is called up in order to reach and challenge the smartphone of the future, the entertainer of this game, together with the other participants in the stadium. link

No. 5 When the list of questions comes to an end and the time runs out, we look at who has collected the most profit. If the smartphone has achieved a higher profit value than the selected participant from the stadium, this money will be donated to charities in the future. If the participant has generated a higher profit or value than the smartphone of the future, he can distribute the amount to the remaining participants in the stadium and thus select a new participant for the next round of questions, who must compete against each other with the smartphone of the future, in the principle described here on both sides, through a new round of questions and face the game again.

## **No. 837 Slawik**

No. 1 You must pay attention to the following in this new slot machine of the future in order to recognize a change in the well-known game, Book of Rah, you will see different and individual symbols from the ancient Egyptian period, now you place your bet on the colored vector points with which the symbol was created, in plain language this means that the symbols show different vector points and are set in different directions, you must now decide on the colored vector points and place your bet on them with double, triple, quad tap, with an individual amount

No. 2 Try to place your bets according to your conscience so that if the same symbols or different symbols with linked directions to each other, next to each other, on top of each other, they can create a stream line connection, which means that the vector points in a line, from left to right, from above and below, as well as diagonally and vertically, in the same color on which you placed your bet, create and enable a connection, this means that if a streamline vector point connection is created and the vector points, in the same color to each other, theoretically provide a connection, your winnings will be doubled, tripled, quadrupled, etc., depending on the amount of the bet.

No. 3 You have to hope that the lines can connect in a coloured close state and position to each other, next to each other, on top of each other, in order to create a streamline line in vertical, diagonal, right, to left, left, to right, up to down and down to up, in order to generate and reap an increased profit from your bet with luck, they click on the respective colored vector points with double, triple, quad, tap to place the bet and hope that a streamline connection to the individual colored vector points can be created, as mentioned

## **No. 838 GetBackClickClack**

No. 1 In this game you have to use all 27 mathematical shapes and distribute and assign them to your own taste in blank areas on an empty 3D globe planet. Once you have placed this area, stones appear in the same shapes, which sit on top of each other, next to each other, under each other, on the individual mathematical shape in the same shape on stones with different emoji symbols set, see mahjong game.

No. 2 Your task includes finding the right stones with the right emojis and linking them together with a click and clack so that they gradually disappear from the stack of shapes and can no longer appear. If you have solved a stone on a mathematical surface shape, this means, as mentioned, that you have found and linked them with the correctly seen emoji symbol, this stone disappears from the mathematical shape of the stack. You must now act quickly and rotate your 3D globe planet by touch and select a new mathematical shape that was previously set and try to find and link the uniform stone with the right emoji to make it disappear from the stack. The principle now continues until you have solved all 27 mathematical shapes from your first stone.

No. 3 You must try to solve all the mathematical shapes from one another, next to one another in all different directions by, as mentioned, looking for the appropriate symbol of the same emoji on the stone, finding it and linking it to one another with a click and clack confirmation and thus ultimately solving it. The goal of the game is achieved when you have solved the entire mathematical shape surface 3D planet from the stones and can solve it in the required time.

## **No. 839 SlamBeam**

No. 1 In this game, you must try to crash a slammer into a stack full of chips so that the front of one of the chips with the graphic, i.e. with the correct side, marked with an individual emoji from the graphic directory collection, appears. The incorrectly turned chips, without the emoji being shown, are placed in a new stack and placed. The visible chips with the emojis are considered to have been won and can be put back in their winning stack and collected and scanned through the back and from then on hidden in the digital map in the real world.

No. 2 The special thing is that the chips with the emojis that have been turned over correctly are used to scan them into the app and hide them in the digital world in a specific place so that they can be found by searching players in order to arrange a discovery match with another digital hunter in the digital version of the game to find the hidden chips from the digital map. map or world in a digital vs. mode, against other online players who have found these digital chips in a duel, challenge

No. 3 The digital chips won, if there are a lot of them, are then brought together in a team agreed upon through communication and in the final game, using the Candy Crush function, they try to be put together in such a way that all the emojis collected by the team can be resolved. They battle with other teams from the online world who have also collected enough and the required number of emoji chips and try to completely resolve their collection according to the Candy Crush principle and thus gain individual points for each connection that leads to the resolution of rows and columns. The team with the most points wins the duel and receives, as a prize, a new real and individual, not yet used stack of new chips, delivered to their home for real play.

## **No. 840 FastCarThunder**

No. 1 In this automatic touch, drag and drop speed racer, it is all about learning the function of touch + tap + drag and drop. It happens when you are allowed to photograph a car that you like on the streets of this environment, secretly or with the owner's consent, and can transport it into the game via photo scan into a 2.785D model car using the photo scan with the help of AI photography technology and use it to start a quick race with the online players against others who were also allowed to do the same in real time. This means that you use the car you have transported into the game in the quick race to transport your photographed car into the game in real time and in the timeline against the individual opponents who are available at the same time, who also have a car with the game application at the same time, using the aforementioned AI photography technology, and can compete in the quick race against you and other individual online players.

No. 2 The race is started with a swing, which means that you have to touch your digitized car model from the real world by tapping and then dragging and dropping it to give it a quick swing to get a quick start and get going. After that, you just have to pay attention to the acceleration strips and the route, which resembles a high-speed highway, in the form of this principle, to get momentum again, to use your car by tapping plus touching and dragging and dropping the procedure function on the acceleration strip, called thunder, in the right position and time to ensure that the car model gets momentum again so that the speed remains stable and does not drop. So that you can keep your orientation on the track, you have a transparent radar that appears just before the curves and directions of the track to show your player, who is driving the car model, the track direction position.

No. 3 So you race against a mass of cars that have registered online in real time for this fastcars race in your area and use the thunder acceleration strip in the correct and correct tap, touch, and drag and drop procedure to get a speed explosion with your car model in order to be faster than the other online players in this Quick Race Massive Multiplayer Race Game. The end of the game is infinite, so the Quick Race game runs on a time limit. The first to come in the top positions in the elapsed time receive skill and upgrade points to improve your vehicle in the next race in Quick Race mode and prepare you for the next real-time duel against newly logged in users from other areas. They have to reach a certain position in their area in order to mark the area they were in with color after receiving the points and thus consolidate their position, which other users then try to beat. will be presented with a different color and an improved time when it comes to the Ghost Duel, as a consolidation in the future, the faster and most driven opponent can color their record or their area and claim the area for themselves in the future, if they have something against it and want to challenge him in the further duel to win back their area in the future and arrange a rematch with each other online at the appropriate time

## **No. 841 ThereSheGoes**

No. 1 On this dating site you will find singles, in female form, who, according to a required criterion, will only accept you for digital communication if, within a certain and required time, when this is given to them at the start, they have to find a digital heart in the real world, which the female single has hidden digitally, in a different place outside of their surroundings or, with luck, in their nearest place, with their Love Radar, in order to then find it with their smartphone and to send it to the certain place or.

To catch the position, this means that you have to scan the area of the target location with your smartphone using the Love Radar and if you can make it visible with the camera, try to record it with the digital hand swype,

No. 2 If the catch of the heart works, the location of your single or the real location is released in order to hand over the digital heart to her in the real world, to show her that they had set out on the adventurous search for her to find the little heart for her in the required time and to catch it for her.

No. 3 Get to the drop-off point as quickly as possible, because time is running against you. If you manage to show the single woman the digitally captured, extraordinary heart in reality at the location of the event where the single woman is waiting for you within the allotted time, you will first receive the real appearance of the woman and a digital kiss from the female person transferred to your captured digital heart via NFC, in order to get a point for the next level of communication with her digitally, which the single woman is difficult to get and only gives you the digital proof kiss for her digital heart and disappears from the real meeting point and meets you again in the online dating app to snuggle up to you via video, text, voice, pictures and get to know each other better via digital live communication online, even though you have already seen each other in real life.

No. 4 Since the woman is also being courted by other men, leave a time ghost for her to quickly find the digital heart in the real world and show her that you were the fastest in the rankings at the time, to show her that she should dare to make the first start with the meeting in real life if the digital communication had worked wonderfully

## ***No.842 MagicalGarage***

No. 1 You have to park your car in a magical parking space or a digital garage, which you first have to go to and find in your area. You can see in your digital map, displayed on your smartphone, where this magical parking space garage is located.

No. 2 Once you have reached the parking lot, your smartphone will show that you are in the digital magic garage. Now you can choose your opponents from your smartphone, who are also in real time in a magic garage, in the sense of a parking lot, and agree on a digital duel between their cars implemented in the app, which you have previously personalized and integrated into the application.

No. 3 You are now sitting in your car with your smartphone in the magical parking lot and are dueling with someone who has just found a place in a magical parking lot and agreeing to race in these digital smartphone races with your personalized car, for example over 3 laps. The winner of this digital race, see approach game need-for-speed, Firza Horizon or Mario Kart, receives the negotiated amount of money if he wins against you digitally in vs. mode, the negotiated stake amount is credited to his account via real-time PayPal transfer and he receives his digital car, which he can incorporate into his fleet in the future for other duels.

No. 4 Search for new duelists in the real world and search for and find the next magical parking garage location displayed on your smartphone to find the next opponents in your area and challenge them to a digital duel as described above, according to the 3-run principle, the faster one wins, leave your ghost time in a ranking list to attract new challengers in your area and possibly rip off the personally digitized cars of the duelists and store them in your digital fleet

No. 5 If you have strengthened your fleet for a long time to come, you can have the cars you have won delivered to your home free of charge by the publisher of this mixed reality game as real miniature cars, originally designed to look like the cars you have won, in your showcase.

## **No. 843 SyzbkoSyzbko**

No. 1 In this messenger, your conversations are supported by a question and answer AI, which means that if you lack the desire and time to create or start a conversation and fill it with topics to make it more interesting, you can integrate this function of the AI into your word usage

No. 2 You start a topic in the messenger and the associated bubble word combinations to simplify the sentence structures, give you the right content on the topic, with images and videos, as an addition to the statements written in your text, the right controversy, for a better understanding of your opinion and for the optimal solution to your communication, several options in the future with multimedia content, provided by selecting the bubble option No. 3 To focus on topics that you carry out in the conversation, you are optionally linked to the news channels of this world and can add them to your conversation via the bubble news option in order to optimize the topic that the content is being discussed about, you can also access multimedia streaming sites with the bubble streaming option and access the simplified content of your desired streaming content

No. 4 You can also access bubble game, music options and integrate games and music into your conversation via AI to make it more exciting. In addition, you can find out about the latest offers in the bubble option shopping, which are displayed in your area.

No. 5 Once you have finished a conversation, you can view this digital magazine newly created in your AI to get an overview of how you want to conduct the next conversation with your chat partner

No. 6 All this is provided to you by the bubble AI option via a newly designed graphic design of the bubbles for simplified conversation, which you can hide and activate yourself

## **No. 844 Jajano**

No. 1 You can try to assign the Google voice assistant Bard a digital 3D or 2D character, which means that this character, which is the actual AI assistant, follows you everywhere on the Internet, which means that you can design your own individual AI character, called jajano, and create it according to your wishes, which you can click on the icon symbol, which looks like a bonsai tree, on demand, step by step by activating it, and which then appears on the display of the website you are currently using and is used to reproduce the texts with AI technology of the future, if you feed it with it, in different forms of verbal fluency, easy, medium, difficult and declares the content in a summarized way that is understandable for you.

No. 2 You can also feed jajano with multimedia content, which means that you can drag and drop images or videos or music onto his head or body, he stores it in the cloud and can present it to you at any time from your personal information database, which will then be displayed for you in a clear multimedia digital magazine of the future

No. 3 You can search for your important information at any time in the digitally created magazine of the future, based on your personal information, and summarize it in a kind of timeline. The information you have collected can be split into several digital magazines according to your wishes, depending on the period, for example quarter. These digital magazines you have created, which contain media information, can be exchanged with other users from the Internet, through other digital magazines, in order to gain an individual insight into a character that you may find appealing, based on the information stored by this user, and may want to accept him as a contact friend in order to link your collected data with him, who in turn could also get in touch with other users from the Internet through this option.

## **No. 845 RoboBike**

No. 1 You have to ride to a certain place with your real bike and your smartphone and stop at a required location, viewed on your digital map of the application, and wait until another user of this game connects to it when he has also reached his location.

No. 2 If both users have reached this position with their real bikes, the game will report a possible communication about the challenge on a digital basis of a smartphone game

If you accept this challenge, you must now compete against the other user from the other position in the real world in a biker racing game digitally on your smartphone, which means that you must get your digital bike going by alternately tapping the A and B buttons in order to gain speed and start driving in the AI level generated by the game.

No. 3 If you have won the Biker Race and previously agreed on a deal for a sum of money, you must pay this to the winner via Paypal, otherwise the winner will be awarded your bike for a certain period of time and will only get his bike back when you have paid him the sum of the money or challenge him with another bike to another duel at another location generated by the application and give him the task of reaching or visiting you at your location in your vicinity or surroundings within a time required by you or the application. If you do not manage to do it within the time, you will lose your real bike completely. If you do manage to do it, the amount of money you lost will be deducted from the amount of money you lost. No. 4 Duel in the area and vicinity at the required and sought-after locations with other people in this game or application and earn an individual amount of money or a new bike for your racing team, or lose everything at once.

## **No. 846 CatchMelfYouCan**

No. 1 In this game, you have to go to a certain place on the digital map in order to then communicate in real time with another user from the area who is in your vicinity or in the surrounding area, in another place.

connect

No. 2 If both have been located at both locations, then a connection is created to the random registered user of this game. After the connection, the aim is to start a digital automatic run game with the user and to play it with a bet of an individually negotiated amount of money. The person who wins the digital automatic run game receives the amount of money in real time from the loser via PayPal to their registered account. In addition, a personal valuable item from your inventory can also be negotiated as a bet in the 2nd option. This means that you have to move from your location to the other user location, in your vicinity or surroundings, within a required time in order to win the negotiated valuable item and then receive it personally at home after the transaction by delivery service.

## **No. 847 ShockValue**

You integrate an icon on ytmusic, Apple music or Spotify in Design of a man or woman, under the play button, if they notice that a played song, from the AI Swip play-lists, causes a gooespump, then they tap with a Click, at the right moment, of the felt goosebump on the icon symbol, and this part of the playing song will be in your Goosbump playlist saved in the future, a Gooespump evokes a happy, short-term emotional feeling in you, use this plugin to reduce your nervousness or depression in real time, exchange your Goosbump playlists with others Users and determine them correctly, to your time feeling and daily rhythm, at which you play the songs to give them a short-term shock with feelings of happiness and to push their brain in the random time space structure

## **No. 848 Starboy**

No. 1 In this game, you have to use a sparrow slingshot to launch your magnet Starboy character into space, and use drag and drop and touch, as well as tap on the emerging jet stream to give them a swing in the direction of the nearby and surrounding stars so that he magnetizes them and his character becomes bigger and stronger, the stars he magnetizes stick to his body, try to get from the individual emerging jet stream into the different directional paths of the stars in order to suck them up with your Starboy

No. 2 The aim is to hit the most stars in a certain time in the space structure or galaxy, using the technique of dragging it down, dropping it up to gain speed by touching the jet stream, touching and taping the Starboy at the right time when there is a star nearby and in the area to magnetize it

No. 3 Travel to the individual galaxies and collect enough stars, these will give you points in time + to reach further spheres in the future with your spaceship, let's jet

## **No. 849 Cochcesz**

In this plugin for eBay Design Architecture AI, you have to record all of your valuables and your room on video so that the plugin can perform an analysis. After the analysis method function, the AI plugin gives you suggestions for products that could fit into the right position in your room or that could harmonize with other products in your room in the future. You will receive a preview of your room through the implementation of the suggested products from eBay AI. This means that your room will be equipped with the suggested products. If you like the look and harmony of this change, you can win these suggested products by auction or have them delivered to your home at a fixed price to redesign your personal living space.

## ***No. 850 Chochie***

In this, imagined, game of Tetris vs. Puypop, you control the 27 different mathematical shapes or objects and try to connect them to each other, next to each other, or to link them together, in order to dissolve them after the link, because these controls come towards you from the directions of the display, top, bottom, left, right, you start your thicket of shapes from the middle of the display, you can turn these shapes in all available directions so that you find a correct connection in the thicket to the next suitable shape, for each individual shape, after the link, you receive points, with the points, you build a digital village in the split screen and try to protect it against attacks from other players and in return, by collecting more points, you unlock special strategic attack functions against your fellow players, in order to ultimately destroy your enemy in the 2 variants in the simultaneous, real-time game, in order to secure an area on the map and to conquer it in percentage terms, conquer it little by little, this way of playing, village by village and become Mr. Chochie World Leader

## ***No. 851 IgelPoint***

You activate the IgelPoint with the Windows or Android program. This digital hedgehog sticks itself, according to your needs, in the position of the website or program you have just visited or will be using in the future. It contains 36 spikes that act as storage. The drag and drop function that you use to save data such as music, video, text and images into the respective colored spikes. The IgelPoint is a digital figure and serves as a database cloud storage of the future and saves your multimedia search history in its body, which is based on spikes of different colors. You can switch spikes with users of the program in order to access other multimedia content. You simply exchange your colored storage spikes with each other in a mutual give and take and receive insight into the search history of the multimedia data of that user from the network, the Internet, through this program of the future. You can also use NFC to stream your data to your screen in a hardware hedgehog gadget that exists in the real world and serves as a presentation projector, in order to examine what has been accumulated in the cloud during the storage of multimedia content from the Internet, in order to then refine the digital hedgehog of the data.

## ***No. 852 IgelPoint***

You activate the IgelPoint with the Windows or Android program. This digital hedgehog sticks itself, according to your needs, in the position of the website or program you have just visited or will be using in the future. It contains 36 spikes that act as storage. The drag and drop function that you use to save data such as music, video, text and images into the respective colored spikes. The IgelPoint is a digital figure and serves as a database cloud storage of the future and saves your multimedia search history in its body, which is based on spikes of different colors. You can switch spikes with users of the program in order to access other multimedia content. You simply exchange your colored storage spikes with each other in a mutual give and take and receive insight into the search history of the multimedia data of that user from the network, the Internet, through this program of the future. You can also use NFC to stream your data to a real-world hardware hedgehog gadget figure that serves as a presentation projector, onto your screen to view what has been accumulated in the cloud while storing multimedia content from the Internet, and then refine the digital hedgehog data.

## ***No. 853 QuickYerk***

In this plugin for IgelPoint.pl, you need to combine a database of questions from vector robots points that search the internet and leave a question with a background AI answer setting option in the relevant passages where there is text on the internet in order to develop a new specific question, which means that the vector robot point that has been set attaches itself to the internet text passage, which will probably make it smarter if it asks it a specific question at that position and then receives an answer from the AI, if you have integrated the plugin into your digital IgelPoint.pl, the plugin will ask you special specific questions, which as mentioned, have been collected on the internet, about your multimedia content in order to find out whether you should use them in the future to become smarter or whether you should look for new ones, it optimizes your multimedia content and asks other users in the IgelPoint.pl network who, through the plugin, provide their future-bearing informative multimedia content to make you smarter and integrate it into their IgelPoint.pl

## ***No.854 Mr.Casper&Mr.Blubber***

No. 1 In this first person perspective, third person shooter game, you and your team have to defeat Mr. Blubber, so-called Blobs, or.

Slime Monster, choose an individual city from the world map, you start with your Blubber character and his followers, equipped with a radar system and have to visit certain places, i.e. buildings and houses that have TV advertising posters on the walls, within a certain time and smear them with your colored slime so that they can no longer be seen, in real time, the team starts Mr. Casper and tries to stop them and clean the posters, armed with their ghost cleaners

No. 2 Before the teams can use their weapon systems, they must first find their ammunition in the city, which means that Team Mr. Blubber must find and collect colored vector points in different sizes and colors, which serve as ammunition for their slime weapon system. Team Mr. Casper must also find the ammunition they need in the city while they are searching, and this is also hidden in the city as individual vector point ammunition in different sizes and color constellations.

No. 3 Once you and your team have loaded your weapon systems with ammunition, go near or around you using the radar and look for the buildings and houses where there are advertisements. Team Mr. Blubber tries to fill the TV advertisements with slime using their weapon systems so that no more advertisements are broadcast and the city can no longer earn money from them. Team Mr. Casper, in turn, tries to rid the buildings and houses of the slime so that the TV advertisements can continue to run in order to earn money from them. The goal of Team Mr. Blubber is to cover as many buildings and houses with slime so that no more money can be earned from the advertisements. They have to fill all the buildings and houses with slime to bankrupt the city. Team Casper, in turn, does the opposite and tries to prevent this so that the city earns enough money to hire new Casper followers with their money so that it is more difficult for Team Blubber to cover all the houses and buildings with slime.

No. 4 The game is financed by companies from the real world that provide live advertising and present products. The aim is to win for Team Mr.

Blubber, to cover everything with slime and to deactivate all the advertisements so that new Blubber, followers, i.e. online players, can be activated for the next round in the next city in order to be able to continue playing the game. The aim is to guarantee advertisements for the Mr. Casper team by cleaning the advertising posters so that more money can be earned in order to activate new followers, i.e. online players for the next round in the next city. The winner of the game is when he has covered more cities with slime or cleaned them, which means more points in the account, which was collected using the process described here.

No. 5 Not to forget, the city followers, other online connection players, must attach the advertisements to the houses and buildings during the game mentioned here in order to generate the time necessary for the game and the battle between the teams mentioned here

No. 6 addition is to change the game, you have to find the ammunition, i.e. the vector points for the teams and the advertisements for the townspeople, from the real world, the vector points with the smartphone, and scan the advertisements and transport them into the game to mix it

## ***No. 855 BringBasketBall***

In this mixed reality basketball game, you must do the following to make it possible: you have a mini basketball hoop for the reality player with WiFi, infrared, bluetooth and NFC connection. These transmission standards are used to communicate with the other player's smartphone. This means in this game example, the player who throws the ball at the mini basketball hoop must turn the ball so that the hoop sends a signal to the other player's smartphone to ask him to also score a basket in his mini game digital basketball smartphone game. In turn, on the next turn, the player must make a throw with the digital smartphone game to send a signal to the mini basketball hoop so that the thrower or player makes the throw and sinks the ball into the basket. All of this is recorded by the slophin camera of the mini hoop and a corresponding selfie of the facial expression is created. This is integrated into the program (see App Gallery) (Pagein Connect) in order to Real time, to find another team for a live duel on the Internet, when you are finished with the duel, agree on a place where you will start the final at an original basketball court in your area or surroundings

## ***No. 856 Data Cracker***

No. 1 You activate the plugin, Data Cracker on your Internet browser and search the Internet pages for digital advertising. If you have found digital advertising on the Internet pages, drag and drop the advertisements with catching arms into the head of the Data Cracker with your 2D or 3D Data Cracker that appears on the Internet page when you have activated it.

No. 2 You feed the data cracker with this digital advertising, as far as possible, the next time you visit the website, these annoying digital web pop-ups are no longer there and are deactivated, this AD blocker can be installed on any Internet Explorer and also protects you in real time from viruses and spam attacks that could infect your operating system No. 3 You can then export the collected digital advertisements from the digital data cracker and integrate them into your digital advertising museum, this is used to use the data cracker's color spitting function to add new color blobs to these digital graphics to see how they change, you can then examine your digital advertising museum yourself and put it online for presentation on YouTube to show what kind of digital advertising artist you have become

No. 4 The security system is based on you, which means that you can also capture your favorite words from the Internet with the catching arms into the body of the data cracker, which in turn sets vector points on the individual letters and integrates a machine code on the individual vector points of the letters of your respective favorite collected words in the future, thereby protecting them in real time from incoming cyber attacks.

## **No. 857 KITFreshMind**

This product contains mini sticks from the organic vegetable industry, which means that these mini sticks, in different lengths and thicknesses, consist of different types of vegetables.

Imagine that you mix together a cup with 3 different types of mini sticks of vegetables + a spice mix in your online shop yourself. This means that you choose your mini vegetable sticks from a digital emoji stick directory on the website, from a digital map + the spice suggested by the online shop and put these emojis in your individual digital cup, which is then delivered to your home in small, medium or large quantities, depending on your request. In short, you get a cup of fresh organic vegetables in mini stick format and the matching spices to prepare yourself in your microwave at home. All you have to do is put water in the cup and heat it up in the microwave for 3 to 5 minutes and then enjoy. Furthermore, on the Kidfresh-mind website, you can exchange your cup creation and constellation with other users from the website network, connect them and create them together in live status. In a broader sense, there are also mini sticks made from meat varieties that can be mixed with the vegetable mini sticks. You decide for yourself in the creation of your needs, which will be suggested to suit your day using the website's AI and in the future will be made available to you at the optimal time for consumption.

## ***No. 858 classroom***

No. 1 in this racing game, you use your own designed bed in the Design Creation Studio and use it in the racing game against other online participants, on the road, in the air and on the water, which means that while you steer the bed through the landscape or track and drive through the transformation checkpoint, the bed or your vehicle transforms into the correct vehicle with the corresponding driving mode to match the change in the level design in order to master and overcome the sections that appear individually as the track changes. No. 2 You also collect power items on the track that allow you to use them as weapons against the other online participants in order to gain an advantage while driving. You also collect colored vector points in different colors and sizes to use them as skill points later to upgrade your vehicle. No. 3 At the same time as you race, you also have to collect text passages or individual words that you will later have to use in order to be able to play the word puzzle to create new level tracks. To unlock, after each race, use the words to solve the puzzle on the blackboard during the break in the game, if you, your race, did not manage to get into the top 6 of 13 players, there are also mathematical tasks during the break in the game, if you have mastered a track level, you receive skill points for each correctly solved task or immediately unlocked weapon systems or design technical updates for your driving vehicle bed in the new race

## **No. 859 *CrashthePrice***

You will have the opportunity to receive a digital discount calendar from  
To get the prizes from your nearby and surrounding shops, try to reveal the  
prices that are available in the days of the calendar for the products that are  
hidden there and that must be made visible using the minesweeper method,  
see windows game, they have the hidden

Products unlocked, you will receive a digital discount on the unlocked  
products and a QR code, because  
You transfer it to your smartphone and at the checkout, for the real  
Product from the digital game, show it when shopping and thereby receive the  
discount to get it at the reduced price

## ***No. 860 CoastCoast***

In this game, you choose an original, true-to-life digital rollercoaster from the world map. You start the race against time, which means that you are brought up to speed with your driver's seat using a kickstart, which is activated by double tapping. Now you have to swype the acceleration strip with your finger from bottom to top on the driver's seat at the right time to pick up more speed and become even faster on the rollercoaster track. Try to reach the track checkpoints in the required time so that you get new times for the subsequent checkpoints. The aim is to master a certain track in a required time or to set a track record for your online opponent. You also have to bring all the rollercoasters on the world map or a certain percentage of victories and provide them with track records in order to be the best at the end, so that you can get the option to construct one yourself in order to be able to use it to challenge individual online opponents in the future. to be able to challenge

## **No.860 ALRED Studios**

No. 1 In this new experience for adults in the erotic industry, you have the following options to choose from to participate in an erotic experience, in which you can partly direct it yourself

No. 2 You go to the erotic internet site, ALRED Studios and register, from the age of 21 and start your own directing

No. 3 You choose an empty space, in an individual location, and add objects to adapt it to your needs and ideas

No. 4 Once you have designed the space and used the AI architecture of the website, you must next develop an avatar for it, which means that you make it look more like a human and dress it according to your wishes and adapt it to your wishes and fantasies. If this avatar figure you have created resembles the actors who will perform the love pact for you in soft, medium, hard touch, with luck. No. 5 Next, select the love positions that will be performed between the two avatars who meet in your self-created design room to have sex or make love. No. 6 In addition, you select the comment bubbles that should be performed by both actors during the love pact. This includes the language of the two actors and pop-ups related to info bubbles.

No. 7 You are also not allowed to change the settings of the camera or Individually select insights and perspectives that show the love intoxication of the two actors

No. 8 Each of the options listed here for the shooting of the short erotic film costs money, you transfer a special amount, calculated according to options selection criteria, to the ALRED Studio with digital coins

No. 6 In addition, you select the comment bubbles that should be performed by both actors during the love pact, this includes the language of the two actors and pop-ups related to info bubbles

No. 7 You are also not allowed to change the settings of the camera or Individually select insights and perspectives that show the love frenzy of the two actors

No. 8 Each of the options listed here for the shooting of the short erotic film costs money, you transfer a special amount, calculated according to options selection criteria, to the ALRED Studio with digital coins

No. 9 If you have transferred the amount in ALRED Coins, then wait until the studio contacts you by email and informs you that your wish, as an amateur director, has made this love film produced by ALRED Studios available for viewing on the erotic website for you to view online. No. 10 In addition, you can acquire the rights to the short erotic film that you have created with your ideas and fantasies through ALRED Studio in the ALRED Studios network on the website for viewing guests for a sum of money you set up.

## ***No. 861 WeeTag***

No. 1 You start the WEETEG application, with a compass as a selection organ, select your desired directions and positions, now the compass searches, in this process, for Wi-kipedia videos that are informative, technical, funny, multimedia, from the Wikipedia articles, in the future created by Kompas.pl or you select your desired category using the compass, which currently interests you and watch the video.

to

No. 2 On Kompas.pl, the videos for the individual Wikipedia articles are created using the functions of Tiktok video technology and can be improved or re-created by users from the selected Kompas network for information, technology, comedy, entertainment and made available to WEETEG.pl

No. 3 You can leave bubble comments and reviews on the videos that are available and use the AI to refine the application and use the messenger function to exchange views on the video in real time with the users who watch these videos in order to provide the developers with suggestions for improvement for the future.

## **No.862 OneourPhoto**

No. 1 Company products are implemented as advertising images in, for example, a grid which must be viewed from a bird's eye view and consists of 36 squares. These images are randomly transferred and distributed across the squares in the grid and are multiplied twice so that they can then be found and linked according to the puzzle principle described here in order to receive points.

No. 2 Each square in the general grid receives an individual number of images which are implemented

in a 3D square room and attached to the walls of the room. If you click on a square in the general grid, you will switch to the 3D view of the square room, where the advertising images of products are displayed in the respective places.

Walls previously attached by AI

No. 3 Now, by swiping, search for the image that appeared briefly on the general grid in the 3D square room and tap it with your finger so that it is activated, then switch back to the general grid after you have activated it and click randomly and at random on the other general squares on the grid in your search to get to the 3D view and find the same image again and mark it, you have done it, then both previously marked images appear on the general grid surface, you now have to pull them together so that they

have activated it and click randomly and at random in your search on the others on the general squares on the grid in order to get to the 3D view and find the same image again and mark it, you have done it, then both previously marked images appear on the general grid surface, you now have to pull them together so that they disappear from the 3D spaces, for connecting the same advertising images, you get points, the aim is to connect all the same or

Twin images that present the same product are to be found and resolved so that the grid is empty at the end of the game in order to load a new collection of advertising images uploaded by the companies that are playing. The player who has managed to resolve the grid in the required time and has collected the most points in the online ranking, which is measured according to the linking time, calculated according to speed, so to speak, receives a spinning carousel with the linked products and can spin to get a free product coupon for the rotated product in the shop of the company that is playing here.

## **No. 863 YepnoOnpey**

You upload your personal money to the Yepno.pl online account via bank transfer or another secure money transfer system at the moment. All online business websites in the future that offer something for sale will, after registering on Yepno.pl, receive a digital plug-in, a glove icon, as a symbol for processing purchases by interested parties who are interested in the products on offer. The glove icon, called Onpey, is then displayed digitally next to the product to be purchased. With one click, the person interested in the product pays the amount in real time to the business website. The money is transferred in real time to the individual company's business account on Yepno.

pl and can be accessed by the company at any time using the digital aqualightxetrix, see App Gallery, encryption

## ***No. 864 Artipin***

We are linking these two existing companies, Pic-sArt and Pinterest, into one structure, with the aim of using PicsArt's database of stickers to create new designs from the AI art, the shifting of the sticker vector points.

Apply stickers to different fashion items, this means that the AI or you yourself put the vector points of the stickers, which are linked to another sticker by the AI, together, through the various mixtures and combinations of the vector points, you get new color constellations and unusual shapes that can be used on blank fashion items and tailored to fit, be creative and use the AI in the area of color linking to achieve a good appearance and pleasant view for your eyes, through the live creation mode, Arti-pin users can try in real time to use the vector points of the stickers from the PicsArt database in a team to get the artificially set

Vector points, the fashion images appearances from Pinterest, to mix new designs in the future and create a new fashion style for the buyers who are interested in it

## ***No. 865 MaskiArt***

The MaskiArt Music program is used on YouTube music videos, for example, which means that it filters out the music-developed layers of the song and uses the layers and places them in the artificially appearing vector points at the right places in the video content that is broadcast. MaskiArt places the filtered music layers, vector points, in real time at the digital positions of the sound layer and compares the artificially set vector points of the video content and compares the distances between the vector points and draws a comparison or simulates a connection between the two vector point functions from the comparison and creates a Ximreal, a new instrumental sound for the future that could be used for new mixes and remixes of the song. Get your hands dirty and link the two vector point function layers with the vector points displayed in 3 different masks in the program and share your self-created, individual Ximreal with other users from the MaskiArt Music network and try out the free Ximreal layers. Network, send your Ximreal, after completion, to the desired singer and hope that he will create a new mix or remix with his lyrics in the future and release this mix and remix, if he creates it, as an additional bonus on his new album

## **No. 866 Newisz**

No. 1 On the website, an infinite number of users register with circular profile pictures in a grid, in the middle of the grid a product appears, shown in a circular border, now every user who knows the product can attach a 60-line opinion plus suggestions for improvement to their profile picture for the product

No. 2 The manufacturer of this product is informed that new ideas about his product have appeared on Newisz, he takes an example from it and develops it further for the future and sets appropriate prices for the buyer groups, depending on the quality requirements on the market, in the future, namely the Internet site Newisz as a vision for providing a purchase

## **No. 867 Mowisz**

No. 1 In this program, which is also available as an Internet site, you log in with your profile picture in a design of a selection of the 27 mathematical shapes available. The facial profile pictures of the registered users appear in a grid and can be viewed as a game. You have to put together the mathematical shapes, which are individually and randomly scattered in the grid and can be seen briefly, like in a memory puzzle, i.e. uncover one identical shape with another identical one. If you have uncovered 2 identical shapes, these are now both linked and revealed. Now you can connect with the stranger, i.e. the user's facial profile picture, and establish contact with him in order to answer the program's question, which is posed to both of you. No. 2 Once you have answered the question, send it back to the program. Now several users are likely to use this principle, the program or the Internet site learns from the users' answers and builds a database on it. and compares all individual answers to the questions asked and draws up a resume, which serves to develop new questions for the future, for newly registered users.

The program learns from the answers to new questions to learn its own answers to new questions.

No. 3 After a considerable time of using this program or the Internet site, knowledge has been built up, which is then used for Internet searches by this program to obtain suitable information, which, when searched for by users of the program or Internet site, has been found, the information one was looking for can be forwarded to people in the general grid, where an indefinite number of users are online, in order to feed them individually with information, who in turn ask questions about the information, which the program or the Internet site then stores in its questions database and uses for new users to possibly obtain new answers.

Through this principle, at the end of the year the program or

No. 4 The internet site, the most desired and searched information from the Internet and shows them in text, the corresponding image and a voice message, through the digital miracle lamp, which acts as an output multimedia function, matching your face profile picture.

## **No. 868 MiniBasket**

No. 1 In this game you have to be armed with a basketball and swipe your finger to hit the basket. You get 3 points for each hit, for a perfect hit, 2 points for a normal hit. The game is timed. Once you have scored a certain number of points, the basket with the ring moves away from the distance and distance from you and becomes smaller. It also moves from left to right, making it more difficult to aim.

No. 2 After a certain number of points is reached, a checkpoint is set, after each checkpoint, the basket with the ring moves back from the distance and makes the mentioned hit accuracy more difficult, in addition, the size of the ring varies with the playing time you play

No. 3 In addition, the basket with the ring changes into 4 different shapes, with individual properties, after a certain required number of points has been achieved, this means that the basket and ring shape is transformed into a square, rectangle, triangle, circle, and the property is also changed, which means that there is an ice basket, fire basket, wind basket, and water basket after the number of points has been reached. In order to get the right ball for the basket property, you have to hit 3 throws in a row, then you get an ice ball, fire ball, wind ball, and water ball.

No. 4 Try to hit the transformed baskets with the special balls you have earned to get special points. These switch after a certain amount of time and change their properties until a certain number of hits have been reached. The winner of the game is the person who scores the most points in the 180 second time limit. The time can also be extended shortly before the end if you get a hit run shortly before the end of the time limit. This means that if you hit all the following balls without missing a shot, you get 3 seconds plus for each hit until you miss again.

## **No. 869 TipTapho**

No. 1 In this game you have to try to tap the illuminated squares in different colors on a grid of squares in a random order or lighting up so that they grow one level up

No. 2 By alternately tapping on the squares, a place or the tapped position grows upwards to form a stack. You must reach the required height to the next level with 4 different colors and then continue tapping using the same principle to reach a new square, colored stack in order to get to the next level.

men

No. 3 The game is timed, you have a certain amount of time to bring the stack to the required height by alternately tapping on the colored squares from the grid, when the time runs out, the height of the stack decreases and returns to its starting position, the goal is to reach the required level in order to move on to the next section of the game.

## ***No. 870 SneakerRun***

No. 1 In this game you have to try to find the fastest way to the goal, in this automatic run game you control running shoes that are automatically set in motion and can run

No. 2 It should be noted that while you are running and controlling the shoes, you take acceleration strips with you in order to achieve greater acceleration. You must reach a required speed in order to gain enough power to jump upwards to another level on the running track. The jump is important so that you do not fall down on the running track before it ends or you absolutely have to hop to a higher level in order not to lose sight of the goal of the track. No. 3 You also collect vector points in different colors and shapes. These are used later, during the game level pause, to upgrade the shoes. Also watch out for barriers and obstacles or opponents that you have to run around and jump over. Also be careful not to stray from the track, as there are no barriers to protect you from falling down.

No. 4 You start the automatic run game with a pair of standard shoes. During the game and after completing the course, you can win or unlock additional individual shoes with improved and modified properties if you successfully complete the goal in the required time, or collect enough items on the various courses and later exchange them for other shoes in the shoe shop.

No. 5 It is also possible to transform your shoes while you are playing by collecting power items. By picking them up, the shoes become faster, lighter, stronger, more robust, jump higher, accelerate better or can collect weapon systems against opponents, etc. Use these power items to make the game easier as you progress.

No. 6 In online battle mode, you play with your self-scanned (photographed) shoes that you transport into the game in a tournament that can last about 3 weeks or longer against other players from around the world. The aim is to get into the top 3 places or to achieve the fastest round times in order to get the chance to get a free shoe in your shoe size from the manufacturer Nike or Adidas. You can also start your own tournament and fight with participants from your area and nearby for your shoe in this digital game. You use your shoe. At the end of the tournament, if you lose to your participant, you have to send him the shoe to his home via DHL. If you win, you get sent his inserted shoe home via DHL.

## **No. 871 BuyRace**

No. 1 In this game you have to try to find the fastest way to the goal, in this automatic run game you control a moving shopping cart that can be set in motion and drive automatically

No. 2 It is important to note that while driving and steering the shopping cart, they take acceleration strips with them in order to achieve a higher acceleration. In doing so, they must reach a required speed so that they have enough power to jump upwards to another level on the running track. The jump is important so that they do not fall down on the moving track before it ends.

You absolutely have to jump to a higher level of the track in order not to lose sight of the goal of the track. No. 3 You also collect vector points in different colors and shapes, which you can use later, during the game level break, to upgrade the shopping cart. Also watch out for barriers and obstacles or opponents that you have to avoid and jump over. Also be careful not to stray from the track, as it has no barriers to protect you from falling down.

No. 4 You start the automatic driving game with a few standard shopping carts. During the game and after completing the route, you can win or unlock additional individual shopping carts with improved and modified properties if you successfully complete the goal in the required time, or collect enough items on the various routes and later exchange them for other shopping carts in the store.

No. 5 It is also possible to transform your shoes while you play by collecting power items. By picking them up, your shopping cart becomes faster, lighter, stronger, more robust, jumps higher, accelerates better or can collect weapon systems against opponents, etc. Use these power items to make the game easier as you progress. No. 6 In online battle mode, you play with your self-created shopping cart in a tournament, which can last about a week or longer, against other players from your area or nearby. The aim is to come in the top 3 or to achieve the fastest round times in order to have the opportunity to get a free purchase at your local grocery store. The difference to the normal game is that you can collect digital shopping products that are actually sold in your shop while driving in the digital game. Then, after the tournament has ended, you can use these as free shopping gifts, subject to your smartphone, at the checkout in your supermarket. can choose and take home for free without paying

## **No. 872 ZeeOne**

No. 1 ZeeOne TV Explorer offers you the opportunity to view the TV programs or shows or films linked by users that were watched most during the day and week. This means that you get a ranking list showing the most watched programs of the day or week with a rating scale. All you have to do is click on the program or film you want to see from the user ranking list and click the Like button to save it to your private timeline. The programs or films you like from the TV channel will be kept there for 3 weeks for playback on your TV.

No. 2 It is also possible to use ZeeOne's AI to create a trailer for the programs or films you like from the rankings in order to get a quick overview of the topic. If you want to see your favorite program or film from your personal timeline, information about the program or film will appear in a news ticker and shopping offers for the products needed for the film or program will also be shown. You can also share your personal timeline individually with other users from the ZeeOne network and use it in the future and create an individual one in real time with ZeeOne users.

No. 3 Integration with social networks is also possible, which means that you can implement content from Facebook, Tiktok and Instagram on ZeeOne and use the ZeeOne TV Messenger to exchange information via these channels in order to stay up to date with the latest multimedia information world. No. 4 You can also surf the Internet with the online browser and create a digital newspaper timeline, which means you can find interesting content and save it in your timeline, which serves as a database and can be filled with input at any time. You can exchange your timeline with other users in the ZeeOne network and compare it in the split screen and add content from other users, update it and distribute it in social networks.

## ***No. 873 SpiderWar***

No.1 In this game you have to try to protect and build your nest with your digital spider, your enemies are other spiders and insects, you start with a spider and develop into an army with which you then try to destroy the other players in the game, the computer opponents and the other online players.

In short, you have to act like in Age of Empires and make your little spider people the most powerful in the Amazon. First of all, they try to find building materials, wood, food, water, gold to fill their stocks with. They have to watch out for the other insects that they have to fight in order to fight their way to these building materials.

No. 2 If you have fought your way to the building materials, you only have to transport them away and bring them to your headquarters, your nest. In your headquarters, these materials will now be processed in a certain amount of time. During the processing time, build barriers and obstacles with your spider to keep hostile and opposing insects away from your nest.

No. 3 Once the building materials have been processed, you can start building individual spider buildings, for example, wood, food, water, gold storage, infantry, technology, web, etc.

No. 4 If you have now slowly expanded your headquarters, you will have to establish further branch headquarters in order to get closer to the raw materials or building materials in order not to have to go so far with your now multiple-produced spider people

No. 5 Once your branch headquarters are completed, make sure that they are not destroyed by wild insects or other online players with their fighting spiders, pay attention to the radar so as not to get too close to the enemy or build your bases near them, explore the landscape with a scout spider and prepare your spider people for a defense or an attack or counterattack

No. 6 The playing area is usually a green area, since the war of the spiders takes place in the Amazon, but can also be fought on a desert, earthy, stony, watery playing area

No. 7 As an addition to the general game, you can purchase special and individual spider packages in your supermarket as packages on a variety of topics and transport and integrate them into the game to expand your spider population and be better prepared for the battle against other online players.

No. 8 The aim of Spiderwar is to eliminate computer opponents within a certain time or, in online mode, to challenge other players from the world in Death Match mode, or to use the campaigns to better understand the game.

No. 9 The game is played in a bird's eye perspective or can also be switched to an ego perspective and converted into a kind of 3rd perspective to enhance the gaming experience

## ***No.874 KingofCook***

No. 1 In this restaurant, the order or the food for your visit to the restaurant is created in the digital app itself, which means that you are given a list of food categories and drinks to choose from, it is up to you what you put together or the digital AI chef character Chevy helps you in the app to put together the products provided as emojis to create a suitable meal. No. 2 You can also select restaurants and food stalls from the world map or your surroundings or vicinity and watch the associated videos on how the food you have previously selected is prepared. These videos are intended to give you information on how to put together your self-created meal in the app better with the digital emoji products. No. 3 Once you have put together your meal from your emoji food product directory, you can use your creation with other users from the network of this app to distribute it and thereby put together an individual variety of a variety of new eating habits in a special list. No. 4 Have you, your food, put together in the digital app, you save it in your inventory and at the same time send the order to the KingofCook restaurant and this in turn gives you the information when you can appear as a guest or the restaurant delivers the food personally to your home address

No. 5 If you have a seat in the restaurant, go to the restaurant at the right time to receive the food that you had previously created in the digital app, either by yourself or with the help of the AI chef Chevy. In addition, you can go into the restaurant kitchen to see how your food is prepared, to learn from it and possibly cook your own food at home with the help of the app. After the meal, you and the restaurant give reviews and ratings on your creation to attach an opinion to the food that was created so that other customers of the app receive information about it and possibly order your creation in the future. No. 6 If someone orders your creation from the app, you will receive digital KingofCook Coins, which you can later exchange for a restaurant visit or a meal of your choice when you have collected enough. No. 7 In the KingofCook restaurant, the walls of the rooms are equipped with LEDs. You can design these walls with the background of your choice to create a fantastic feeling during the meal. food, you choose the background from the app's database or create your own for your next restaurant visit at KingofCook Restaurant, of course the appropriate music for the meal is also offered to you through the app settings, which you will later hear in the restaurant with the LED walls and the background you selected

## ***No. 875 Pinguinos***

No. 1 In this game you have to try to get a digital penguin on the way through a sparrow slingshot, that is, you touch it and swipe with your finger to send the penguin through the sparrow slingshot onto the ice track

No. 2 The penguin gets momentum by being thrown onto the ice track and gains an initial speed. The track resembles a bobsleigh track, on which the penguin lands and gains more speed through the curves of the bobsleigh track. In addition, he picks up more speed in the curves on acceleration strips.

No. 3 Try to control the penguin optimally in the curves of the bobsleigh track and maneuver him correctly on the acceleration strip to gain more speed

No. 4 In the time race, try to complete the remaining laps to unlock the next track, in the team race, race against other online players, armed with collectible weapon systems that are provided on the track, to reach the first 5 places out of 16 players to receive points for the respective placements

No. 5 Those who finish in the top 5 places in the team race will receive individual points credited to the tournament, try to finish in the top 3 at the end of the track tournament to unlock a new track country on the world map

## **No. 876 Muwisz**

No. 1 In this messenger, you can access the existing content from Facebook, TikTok, Instagram, Youtube and streaming sites from the movie and music industry, as well as news channels from this world and internet sites of all kinds, which means you can communicate with users from all over the world and incorporate the content from the aforementioned multimedia content

No. 2 You have the option of selecting videos, texts and images from the companies' multimedia and Internet pages from the various areas and categories using the content scroller and incorporating them into your AI-supported message, which finds the right content for your message and integrates it into your message. No. 3 In addition, message channels can be implemented in the message with AI to match your content or called up in the messenger. In addition, the streaming movie - Netflix, Amazon Prime, Disney+ and music sites - Ytmusic, Apple Music - are linked in the messenger, which means that you can access your movies and music pieces by quick selection and send these playlists to your contacts with your personal recommendations. No. 4 In addition, you can search for content on the normal Internet in the messenger using the new, integrated search and save the things that seem important to you in the messenger using drag and drop into your personal multimedia database of information, call them up, integrate them into the messenger and forward them as a message. No. 5 The messenger is built like your own room, which you can transfer to the messenger by scanning from your smartphone to your mobile phone profile. You will then see your room in 3D with the various options that the messenger offers and can start communicating in this world from there. You can also stream the messenger on the television and have it displayed there and from the television, with a larger screen diagonal, the

Use the messenger's functions mentioned here in a new graphic design format to communicate with the world and your contacts

## **No. 877 AsteriodShock**

No. 1 In this game, you must use a sparrow slingshot from your main control center on the left side of the screen to try to hit flying asteroids that arrive from the right side of the screen with different planets from the solar system. Each asteroid is shot at with a specific planet from the solar system, see Mars, Venus, Jupiter, Moon, Sun, Earth, Mercury, Venus, Uranus, Neptune. No. 2 If you were not able to completely destroy the asteroids and they split into several parts, there are still enough stars left that you can use as ammunition against the split asteroids. The number of planets is limited, but the number of stars is not. No. 3 There are also magic stars with special abilities, such as ice stars, fire stars, water stars, wind stars, small, medium, large stars, etc., which are used specifically against individual asteroids. No. 4 You get points by destroying the asteroids and in divide several parts and ultimately destroy them, the game runs on time and on life energy, related to your main headquarters, you have to stop the asteroids in the required time or destroy them all, until you can get to the main headquarters, because if that happens, your life energy is taken away, if you lose all the energy in the time when the asteroids hit the main headquarters, you lose the game No. 5 As the game progresses, you have to use several sparrow slingshots from the other directions of the display, top, right, bottom, because the asteroids then appear in the middle of the display and are then, from their sides, where the sparrow slingshots are, so to speak, attracted to the other main headquarters No. 6 In the switch, try to head for all directions of the sparrow slingshots later in the game in order to shoot the asteroids with the planets of the solar system and the special stars from all directions No. 7 The game is considered Won if they manage to stop all asteroids, protect their headquarters and meet the required time

## **No. 878 Diwan**

No. 1 In this game, you must try to complete various flight and ground routes, with special route direction changes, with a self-designed and created carpet, as well as an individual character. You fly and run through time checkpoints to continue the running time and switch the function of the game. No. 2 While you fly and run through the flight and ground routes with your carpet and your character, you must collect certain items, so-called colored vector points, in different sizes. These later serve as an upgrade function for your flight vehicle, i.e. your carpet and your character.

No. 3 You must collect weapon systems while flying to prevent your enemy online opponents from overtaking you more often or not at all while flying and running. These weapon systems are represented by different icons and can have different and special functions, dynamite, fireball, ice ball, wind ball, rocket, pistol, oil trail, barrier, cannon, etc.

No. 4 The game is played against 13 different online opponents, they also fly and run in different levels, sea, desert, mountains, city, village, forest, in the air and run after landing to the ground, where the game is switched and you, with your character, in automatic run, try to complete the ground route, a time checkpoint must be reached, which in turn serves as a transformer, which means that if you fly through this checkpoint, you are then switched to the ground route and in turn switched from the ground route to the air.

No. 5 You have to watch out for different and individual barriers and obstacles in the game and try not to get off the track on the ground, otherwise you will fall down and have to wait a while until you can start again

No. 6 Try to get into the top 3 places in tournament mode to get points depending on your placement, the one who has earned the most points at the end of the round-based arcade racer will be declared the winner of the tournament

No. 7 Through the individual vector points collected, you can upgrade your carpet and your character during the round game break to make it faster, more robust + jumpy, steering, accuracy, etc. Use the vector points to improve its game characteristics

## ***No. 879 StepByStep***

No. 1 In this game, you have to try to climb stairs with a shoe, which means that you start with simple steps, the game works by tapping on the shoe and it performs a jump onto the stairs, you also have to skip several steps by swiping over the enemies and barriers that prevent you from performing the normal jump

No. 2 With a short tap, you make a small jump, with a medium tap, a medium jump and with a long tap, a large jump. Please note that you must not stand on the individual steps for long, as they will start to wobble and dissolve after a while.

No. 3 Try to navigate to the appropriate colored vector points at the right time and activate the color that is needed for the next colored level. If you activate the wrong color beforehand, you will slide and jump one step back on the stairs. No. 4 You can also collect hearts as you move from left to right on the steps to activate the colored vector points. These hearts give you more time points for your time credit account.

No. 5 The game is timed and you must reach the required height and number of steps, otherwise you will start crossing the stairs again from the last set checkpoint

No. 6 Once you have passed the initial training levels, you will begin to master the game at famous locations such as the Eiffel Tower, Pisa, Statue of Liberty, etc.

## ***No. 880 Sunroll***

No. 1 In this game you have to try to master an individual track with a moving sun, which means that you have a chassis and the sun is mounted on it

No. 2 The special thing is that when you have reached a certain speed by collecting individual stars, you can throw the sun out of the undercarriage and roll with it to the next checkpoint. You have to collect enough stars on the track to increase the speed so that you can roll out the sun to roll with it to the next time checkpoint.

No. 3 If you don't make it to the next time checkpoint while the time runs out, you will have to start playing the level again from the beginning, watch out for barriers and obstacles, as well as enemy opponents that you must jump over or dodge to avoid a collision

No. 4 In the time race mode in the various galaxy levels, it is all about being faster than your opponents and leaving them a time ghost, try to reach as many galaxy levels with the best time to unlock new galaxy routes

No. 5 After each best time, you leave a flag on the track in the galaxy and color these tracks with your color as a sign of your best time. Now online opponents try to beat their time and beat the flags or the colored tracks with their best times and ultimately take them away. The goal is to reach the highest percentage value with the colored area in a certain time in order to end the game as the winner of the tournament.

## **No. 881 Boomerace**

No. 1 In this game, you must try to collect ammunition while driving a boomerang vehicle, i.e. small, medium and large boomerangs and throw them into the small, medium and large circles while driving, in order to achieve an increase in speed that you need at all times in the game. No. 2 Once you have collected your ammunition and hit the correct circles with it, your general speed increases on the individual route that you are driving on.

No. 3 You must also collect special weapon systems, for example, dynamite, fire - ice - wind - water stone ball, rocket, cannon, pistol, etc. and use them against the driving opponents in order to create an advantage while driving, and you also collect colored upgrade vector points to use later to update your vehicle with its properties, so that the game can pause in the rounds.

No. 4 The tracks have different height levels, which means that at a certain point and position while driving, you have to use the liana function to fish your way to the next higher level or use the liana to quickly hurl yourself to a certain point that will pull you up in real time

No. 5 You race against other online players and try to compete against them in the tournament to win the game according to ranking points at the end, you can also use the time trial mode to see who the fastest Boomerang Racer on the planet is at the moment

No. 6 On the routes, portals called checkpoints appear, which transform your driving vehicle into an airplane or water boat and adapt to the changed route sections in order to master the special changed route guidance

## **No. 881 Boomerace**

No. 1 In this game, you must try to collect ammunition while driving a boomerang vehicle, i.e. small, medium and large boomerangs and throw them into the small, medium and large circles while driving, in order to achieve an increase in speed that you need at all times in the game. No. 2 Once you have collected your ammunition and hit the correct circles with it, your general speed increases on the individual route that you are driving on.

No. 3 You must also collect special weapon systems, for example, dynamite, fire - ice - wind - water stone ball, rocket, cannon, pistol, etc. and use them against the driving opponents in order to create an advantage while driving, and you also collect colored upgrade vector points to use later to update your vehicle with its properties, so that the game can pause in the rounds.

No. 4 The tracks have different height levels, which means that at a certain point and position while driving, you have to use the liana function to fish your way to the next higher level or use the liana to quickly hurl yourself to a certain point that will pull you up in real time

No. 5 You race against other online players and try to compete against them in the tournament to win the game according to ranking points at the end, you can also use the time trial mode to see who the fastest Boomerang Racer on the planet is at the moment

No. 6 On the routes, portals called checkpoints appear, which transform your driving vehicle into an airplane or water boat and adapt to the changed route sections in order to master the special changed route guidance

## ***No. 882 laundry basket***

No. 1 In this game, you must try to use the drag and drop function to pull the dirty, colored, flashing laundry clothes that you are looking for into your laundry basket from the hanging lianas. For example, if you have filled your laundry basket with T-shirts, you must try to throw them into the opening of the right washing machine using the swype function in order to be able to wash the laundry and then, after the wash cycle, drag and drop the fresh laundry onto the right positions on the laundry line.

No. 2 For each correctly dropped individual piece of laundry in the laundry basket, you will receive coins, which you need to get the washing machine running, to wash the laundry and then drag and drop it onto the required laundry line, if you don't manage to get the laundry into the washing machine, it will land back on the dirty vine at the beginning and will have to be dragged into the laundry basket from the beginning No. 3 Watch out for the color blob monsters that appear and try to contaminate your fresh laundry, use your digital water pistol to chase them away from the clothes so that the freshly washed clothes don't get dirty again

No. 4 The game is timed, try to clean all dirty, individually laundry clothes in the washing machine and pull them onto the clothesline to get to the next level

## **No. 883 Rawbax**

No. 1 In this sales app, you must first photograph your real products that you would like to sell in an AI architecture room designer and then digitize or convert the photo into a 2D or 3D object in the app.

No. 2 After creating your sales designer room, you can place your personal digitized products that you want to sell in positions of your choice in the digital sales room, which means that you can, for example, put your games console on the dresser, place your TV on it and place objects next to these things, you can place clothes in your closet, shoes in your shoe closet or pictures on the walls, there are many setup and position settings that you can make

No. 3 If you have positioned your products in the digital sales room that you want to sell or offer for auction, then make your digital sales room available online at room-bay for buyers. Buyers can then view your digital room and find your products for sale that you have searched for using a search function in your room.

No. 4 The prospective buyer clicks on the activated product he was looking for and can view it in 2D or 3D and decide whether he wants to buy it at the set price or take part in the individual sales auction. If he takes part in the auction, he can see the expiring time on the product, when the offer ends and he should then place his bid for it in the right time.

No. 5 If you have decided on some products, you can put them in your digital shopping cart and make the purchase later. You mark the desired products that you would like to look at later with a heart and find them in your watch list or in your watch room, where you can place your personal products that you are looking for and want to buy later.

No. 6 If you have decided on a product from your digital observation sales room, you can have it delivered to your home by post or DHL and shipment tracking. You can also find other digital sales rooms in your area or surroundings using the radar and arrange a private pickup appointment or offer it from your digital sales room.

## **No. 884 Firecolor**

If you have exchanged a Coverysid app tag with each other and exchanged information on it, you can use these information covers at the firecolor festival

THAT means you can apply for a sidin that consists of the symbols circle, square, rectangle, triangle

For example, if you have technology as a topic, sit in different places, in a circle, or in a triangle, for example, and present your information.

For example, if you have presented a topic, you will receive feedback from the other circle members who will give you their feedback and upgrade you

They combine their Coverysid slips with the feedback and data provided this up

SHARE your Coverysid notes with someone who has a different topic and is sitting somewhere else

This means that someone sitting in a rectangle gets a topic from the technology area and swaps it with someone sitting at a different symbol, for example in a square area, for example with a topic from the economy area.

Exchange the information with each other and choose your symbol area that you feel is good after you have gone through your initial experience through your information

out of

After the informative exchange of information has been confessed, a fire is deposited, which means that unnecessary information sheets created by Coverysid are placed in the middle of the

Area symbols find their place in the fire to create a cozy atmosphere

Many laugh about it, because the Coverysid notes leave non-binding colors in the fire and a friends dance afterwards they are supposed to leave before they connect with new ones again in order to be able to present a presentation

The ceremony is intended to make us rethink the news we consume and to point out that a brainstorm could take place within the area we have exchanged and will improve in the future.

## **No. 885 Dreamcat+**

No. 1 The new Dreamcast+ will have the following new functions in the future, improved and future-oriented hardware, the Dream-cast+ console can be mounted on the TV or on the ceiling and has WiFi, SD and SSD hard drive slot, USB slot, battery slot, projector, handheld, touchscreen display, smartphone slot, mouse, keyboard, camera, VR

With the integration of the handheld, you can record your real room with a special camera function on the handheld. You thus digitize your real room into the home screen dashboard and control it so that the other functions described here can be used. No. 2 The functions include the multimedia integration of

streaming and social networks into the dashboard, i.e. into your own digitized room, as well as the use of the entire Internet, which can be controlled using the drag and drop function and incorporated into the room. This means that you can drag all information, such as videos, images, text into your dashboard using the drag and drop function, through the browser, into your digitized room and organize it into your dresser or closet by category. The dashboard serves as a live operating system and interacts with the entire Internet, streaming and social networks, as well as the app and game stores of Android and Windows. No. 3 You can simply stream the games, films, images, music to your handheld from the main console and transfer and save the data of the stream to it using the built-in virtual memory card. this VMU can be unplugged and shared with

friends in the real world, and the operating system can also be loaded onto the VMU in the future and integrated into the handheld on other Dreamcast consoles, which has the advantage of being able to share with your friends in the future

No. 4 In addition, your smartphone can be integrated into the Live Operating System. You plug the smartphone into the console and can immediately interact with the Live Operating System. For example, you can conduct video, live chats and exchange information with other users from social networks. + Move around in the Dreamcat+ network, which corresponds to a 3D globe. You can exchange videos, images and texts that you have collected on the Internet in the Dreamcat+ network, as well as organize network parties for playing in the stream, and upload apps live to your digital room. No. 5 You can transfer your collected data from the Internet, which you have dragged and dropped from the Internet browser, from your digital room closet, i.e. the Live Operating System, which serves as a digital online cloud hard drive, to your smartphone or create a digital newspaper with categories and make this freely available to Dreamcat+ users in the network or save it on your VMU memory card and exchange it with friends in the real world.

## **No.886 LokkwhatYou**

No. 1 You must try to control Netflix differently, you have the following options available to you

No. 2 Try to take a screenshot and send it to your friend, take several screenshots of movies and send them to your friends list on netflix

No. 3 From the screenshot, your friend can continue watching the scene and in turn make a suggestion to you to bring a scene into action with a screenshot from where you could continue watching

No. 4 Design the scene with the integrated editing function Sticker, which you know from Picsart, submit a sticker and possibly a text block and display the scene with a voiceover and a special effect, save this screenshot and send it to a friend via WhatsApp or share it in your social media network with other people.

No. 5 Use emojis and comments on Netflix to better understand the description of the film

No. 6 Send the media screenshots to the Netflix carousel, hope that you will be selected and you will find a place in this carousel

No. 7 The Netflix carousel is updated daily and can show you a random movie through the created media screenshots that might seem interesting to you

No. 8 Rotate the carousel and select your shot from the media screenshots created by Netflix users

No. 9 The media screenshots can be linked from the carousel and created into a playlist, which can then be shared as a li-neup on networks and exchanged under Netflix

## **No. 887 Ladislav**

No. 1 You log in to this app with your fingerprint sensor, the app then searches for similar fingerprints that are similar and could match each other

No. 2 If you have received a match with your fingerprint, the app gives the faces that have not yet been shown the following task: the app hides hearts in their surroundings and area, especially in a forest, which find their place on flowers and trees.

No. 3 your task is now to search with your smartphone and find these hearts and capture them with your smartphone, if you see a heart that has been hidden on a flower and you capture the individual heart at the right time and at the perfect time of day, the smartphone remembers the flower and searches on [dzienkuijeqwait.pl](http:// dzienkuijeqwait.pl) for the real flower that looks similar and automatically orders this variety of this plant to your home free of charge

No. 4 If you have given your address, you will now receive your flower from [dzienkuijeqwait.pl](http:// dzienkuijeqwait.pl) Your beautiful flower will be delivered to your home and you must now take the flower in your hand and go back to the place where you digitally captured the heart and take a selfie, send this to your finger print sensor match and hopefully the person will like what they see

No. 5 You then have the option to address a voice with your own or an individual voice to the person, if the person accepts your selfie, write them a short message

No. 6 If the person likes what you said or wrote, then that person has to go to the real place where you picked up the heart and pick up the heart you left behind to unlock your photo of the face. If they like the face in the photo, you can expect the person to bring the flower or flowers they won to their first date.

No. 7 Fall in love with new people on this planet through search and movement and through the print of your finger with the app of the future, ladies love Ladislav

## ***No.888 MagicalBaket***

No. 1 in this game, try to hit a moving digital basketball basket that moves from left to right and can change its height, with various magic basketball balls, the balls include ice ball, fire ball, water ball, wind ball

No. 2 The basket changes its properties while you are taking the normal shots to an ice basket, fire basket, wind basket, water basket, you have to switch your basketball when the basket changes its properties and hit it with the appropriate magic ball to put it back into standard mode to turn it into a 2-point or 3-point shot No. 3 You play in split screen against other online players and can even throw the ball into the opponent's field or basket as a bonus shot through the split screen if you have unlocked it by achieving points, the bonus shot means that if you hit the online player, 2 or 3 points will be deducted from him and can therefore bring him into a negative result

No. 4 The game is timed and the person who scores the most points in the time running out can challenge another opponent through the random online carousel and work their way up the rankings. The players who are in the top 3 in the rankings at the end of the month will receive a free mini basket to take home.

No. 5 The mini basket has a built-in touchscreen with WiFi connection and is connected to other mini baskets, you can start a mixed reality duel, which means that you can search for another player with the touchscreen and challenge them to a real-time duel in your home, which means that the mini baskets notice every hit in real time that is thrown live from your home and compare the score with that of the other players, the one who has thrown the most points from home, comes out as the winner and wins an invitation to a basketball game in your area or surroundings

## **No. 889 HDM HumanDinoMachine**

No. 1 In this strategy action game, you must try to build an infrastructure and an individual empire with one of the teams, humans, dinosaurs and machines. Based on Age of Empires, you must try to develop your infrastructure and empire from era to era, so that you can later build a peaceful empire.

No. 2 It can happen that the other team tries to attack, so build a huge fortress by collecting resources and prepare for the attack of the other teams or retaliate

No. 3 So that they can reach their fortress or a faster construction in the next epoch, they can buy their individual construction points with magic cards from the supermarket or collect them through their normal shopping and transport and implement these in the game using the QR code scanning process. No. 4 The game is viewed from a bird's eye view, but can also switch in real time to the ego or 3rd party

perspective in order to control important strategic mechanisms in the game.

To overcome, the one who destroys the opponent or occupies the most territory in the running time, wins the real-time online match between humans, dinosaurs and machines

## ***No. 890 Diskfarbo***

No. 1 In this game you must try to throw a discus as far as possible to the appropriate, individual colored position or area with the swype function. If you hit the required colored position or individual area, blue, green, yellow, red, in this case you can make another throw from there. From then on it continues like this until you have reached the required distance and have reached the goal. No. 2 On each area you hit, you receive new discus ammunition, which you need to reach the goal of the distance. Blue area 1 discus, green area 2 discus, yellow area 3 discus, red area 4 discus. Once you have reached the goal of the distance, you must try to throw colored ducks with your collected discus ammunition.

No. 3 The goal game is timed and you have to reach the goal at the end of the time + hit and destroy the colored ducks with the colored discus to get to the next track level, you play the game in split screen against another online player and have to face him and hit and destroy the duck at the end of the track faster than your online opponent

## ***No. 891 Selector***

No. 1 In this game, try to hit the 27 mathematical shapes that are arranged as a continuous line from top to bottom in the middle of the display with your finger Swype, first from the left and right side of the display with the same shapes to resolve the shapes that move towards each other in the middle of the display

No. 2 The shapes are also available in different colors and sizes, shapes that could possibly fit appear at different intervals and time intervals on the left and right side of the display edge, if you see a shape that would fit, then swipe it with your finger from the left or right to the middle of the display, where the shape you are looking for is located

No. 3 After successful swiping, the shape symbol in the middle of the display dissolves and disappears from the continuous line, try to solve the other mathematical shapes by correctly and optimally swiping the shapes from the left, right and also from the lower and upper areas of the display edge

No. 4 The game is timed, for each correctly swiped shape you receive time points +, credited to your time credit account, for each shape not correctly hit, the continuous line shape in the middle of the display speeds up and makes it more difficult to swipe correctly, after, for example, 5 correctly placed shapes, the continuous line shape slows down and you have a better chance of resolving the shapes more easily, so you have to try to connect or hit the shapes in a timely manner from the 4 position directions of the display and thus resolve them

## ***No. 892 Volgosto***

No. 1 In this game you have to try to climb a power pole. By pressing the A and B buttons alternately you will reach the power pole at a certain speed and at the top you have to try to shoot flying ducks with your power gun or cannon. To do this you charge yourself up the power cable by walking on it and going to the other end to the next power pole. You use the path as a guide. No. 2 The ammunition or the charging of your power gun or cannon happens when you conquer the power cables. On the power cables there are power items, i.e. the ammunition you need to shoot from the power cable position at the different types of ducks with your power cannon that are in the sky above you.

No. 3 You also have to catch the ducks, which are different in shape, size and colour, when they are electrified in the air and fall down, with a basket. For hitting the duck and catching the ducks on the ground, you get points that you receive to earn a time bonus to extend the game further. No. 4 The game is played in split screen against another online player, who first tries to climb the mast and, according to the principle mentioned here, to hit the ducks and then catch them. The player who gets the most points when the time runs out wins the game and can compete against a new online player in the next randomly selected game.

## **No. 893 Vapor**

No. 1 In this game, you try to create your own character using the AI photographer plug-in on your smartphone and then use or implement it in the game later. No. 2 The game is a mixture of wrestling and break-dancing, which means that you can use your character in the game and compete against other characters from the online world.

No. 3 The locations are in mathematical forms and are scattered and usable everywhere on the online world map. The locations are randomly selected or you are given original locations from your surroundings and vicinity, where you have to fight. No. 4 The mixture of wrestling and breakdance works as follows: you fight with the usual wrestling fighting moves that you know from the wrestling universe, mixed with breakdance moves, which means that while you are wrestling and you deliver your moves and use them on the online player through this application, you can earn points. With these points, if you have enough points on the points display, you can unlock your breakdance moves.

No. 5 Use the breakdance moves at the right moment in the fight to make the other online player dizzy and paralyze him, so that you have the chance to perform a finishing move when he has little energy on his fight display. In the fight, the game switches to the ego perspective and colored vector points appear on the opponent's body and head, which you have to hit in order to collect these points for the breakdance move through kicks and punches.

No. 6 Otherwise, the game can be played in the third person perspective and offers other options and features. You can collect individual power items for different levels when time allows, in order to perform special moves for free while you are fighting and to link them with your player and to connect or target the opposing player. No. 7 The fight is over when the opponent, in this case a randomly selected online player who is drawn from the carousel, loses his last bit of energy

with a finishing move at the end and can no longer get up. The fight is timed and can therefore be ended early with the finishing move.

## ***No.894 CasinoRoyal***

No. 1 In this poker variant of poker, in the general case of Texas Holdem, the poker players have marbles of different colors and sizes that have a monetary value to choose from, these marbles must be purchased in order to play with them, this means that there is a radar circle in the middle of the poker table, when it is a digital or real poker player's turn, he plays his normal hand and his bet, the marbles when they are randomly unlocked as a function of the timebox

No. 2 If the timebox has activated the marble function, the player whose turn it is murmurs as close as possible to the inside of the circular radar and places his bet by pushing the marble. The next player must try to murmur it away from the radar circle. If he manages to do this when the round is over and he is the last one left with his marble by luck, then he collects the amount of money that he had on his marble before and that he kicked out and spent from the radar circle through several rounds of murmuring with his marble.

No. 3 After the successful marble battle + Texas Holdem integrated, the poker player receives the marbles he has kicked out and can exchange them for money at the end of the game for the amounts of money on the marbles or use them for further play in the future or win even more marbles by doing so, this is up to the online and real poker player, according to their own opinion.

## **No.895 AirMax**

No. 1 In this game you have to try to control the digital character Max, you move him from left to right and from top to bottom, as well as diagonally and vertically, so basically in all directions in the field of the display and you have to avoid flying vector points of different colors, shapes and sizes with him in connection with his backpack and catch or suck them up with his pipe system, which is connected to the backpack, and give them back to cats that are moving at the edge of the display by throwing them from the pipe system. No. 2 Max can also increase and increase his speed by charging him several times with power items that appear and can be collected after catching the individual vector points, you have to catch the individual vector points and transport them back in the directions from the display, the sucked up vector points are processed in the backpack and you are informed by a display on the backpack about the directions in which you should transport the vector points from the display.

No. 3 On the edge of the display there are digital cat creatures that try to catch the individual vector points, they control them at the same time, with touch swype from position to direction and vice versa, try to catch these individual vector points with the cats that appear on each edge of the display in order to feed them with them

No. 4 The aim of the game is achieved when you have fed the cats so much that they take on a fat shape and interact with the game, you have to catch the individual vector points that appear randomly with your tube suction system and pay attention to the time it runs against you, trying to throw at the cats

No. 5 Once the cats have been fed and have taken on a different form, they can use their special moves (fireball, ice ball, dynamite ball, wind ball, water ball) to help hit the different vector points that randomly appear on the display from all positions after the cats have transformed, in order to ultimately eliminate them.

No. 6 The final goal of the game is to dissolve all individual vector points that appear and to free the display from them. The game is timed. Try to dissolve all binding vector points and free the display from them in the running time with AirMax and his friends, the cat creatures.

## ***No.896 Touchvius***

No. 1 In this game you must try to challenge an arm press challenge against other online users randomly selected from the carousel, this means that 2 people are drawn into the carousel at the same time and duel and fight each other in arm presses according to the following principle. No. 2 You must start with an arm vs. arm battle, this works with the following command, you tilt the smartphone and listen to the sounds that give you a signal as to how much you should tilt the smartphone, turn it back or into the right position and position it, this happens in the freedom of movement, pay attention to the signal tones and follow the instructions that are given to you by the sound in order to activate the arm to a certain depth and height or first power to press the arm. No. 3 Once you have followed this principle, you move on to the next step, which means that colored vector points of different sizes become visible on the arm, touch these individual vector points in a certain order with tap, double tap, triple tap, per touch in a durable, short, medium, long pressed position, with the finger, on the respective vector point, if required, in order to stimulate the muscles and strength of the arm and give it the character, the necessary power and acceptance to press down the opponent, in order to ultimately win the arm pressing battle

## ***No.897 WeDahookOnBeat***

No. 1 You must add, in this digital music application, to realize a new creation of the instrumental beat and the lyrics that will be sung

No. 2 You import your text passage + a new text passage + a new text passage from a YouTube song using the program's AI, using the drag and drop function, onto a digital hedgehog, so to speak, onto its spines. The digital hedgehog has around 36 spines, 18 spines for the beat section and 18 for text passages, which are put together later in the application by AI. No. 2 Drag a maximum of 6x short, 6x medium, 6x long passages into the spines of the hedgehog using drag and drop from the YouTube song. The hedgehog uses the application's AI to create randomly placed text passages using its movements in individual directions on the display and rotations in a transparent 3D process to connect the text passages with each other logically and meaningfully.

No. 3 Now drag your beat passages from the YouTube song of the instrumental that catches your ear and that you like at the time of drag and drop into the small 6x, medium 6x, long 6x, spines of the hedgehog and proceed according to the principle as just described and let the hedgehog move through the display + transparent 3D change of direction decide its own directions

No. 4 Through his movements, a connection of set colored vector points from the letters in association with the highs and lows of the instrumental is started in the inner core of the hedgehog and a logical sequence is created by the AI to the vector point design of the letters and the sound levels that you have previously extracted from the song and implemented in the spines of the hedgehog, instead of

No. 5 The AI of the application now uses the logical and algorithmic connection of the instrumental beats and the text passages, the logical connection to the text and sound and creates a new, AI-generated song for the future for your favorite from the network of artists who made the program possible and who allowed the authentication and permission of the copyright

No. 6 You can also put your hand to the principle yourself, you simply randomly place the spikes of the instrumental beats in your desired order, to match the set text passages with color logic of the spikes to each other, next to each other, towards each other and receive an assignment created by you, which could possibly bring about a new song in the future

No. 7 Exchange your hedgehog with other online users of the network and mix based on the spikes, a completely new mix or REMIX or a new song based on the color setting of the spikes of the hedgehog, which was made available to you as a sound and text engineer

## ***No. 898 StillinTheKitchen***

No. 1 You must, for this restaurant of the future, all work together and try to understand the job together as a distribution of good and delicious information

No. 2 You buy a StillintheKitchen SITK camera and film your cooking skills that you have learned from a first-person and bird's eye perspective or follow a recipe for ingredients that you have previously obtained from your local shop and show the ingredients you have bought with the filmed SITK camera and put them on a paper list to copy in the future, filmed on video + the ingredients you have bought, which you film and present in a clearly visible place for orientation for the viewer who will watch later, who can search for this video through the StillintheKitchen network, watch it and imitate it at home

No. 3 You start cooking with the ingredients you bought for cooking and give your opinion on it if you want, or leave it out. You show your skills from a first-person or bird's eye perspective with your StillintheKitchen SITK camera and go from the beginning of the preparation, intro, to the mid-section, middle and out-section, end of the cooking, according to your paper list or list of ingredients. All of this is filmed without editing and can ultimately be uploaded as a video tutorial to the StillintheKitchen network in the appropriate category. The trick is that you can create a real recording with the SITK or create a new comic-like representation using the SITK and also make this available in the appropriate category for free viewing on the network.

No. 4 If you are registered with your creations in the network, you can take part in the restaurant competition, which means that you can be drawn at random after you register and invited to the StillintheKitchen restaurant to act as a cook for the registered guests from the network who have registered for it. If you have done your job, i.e. the food and the cooking function well, you will receive special planet icons, as review points, credited to your profile in the online network by the guests who served as review guests and were guests in the Still-intheKitchen restaurant. Try to do your cooking job the way you learned it at home and transfer your skills to the rest of the time in the restaurant cooking session to satisfy your guests and to collect planet points or icons for the future.

No. 5 Collect these planet points with other users from the network and redeem them. After collecting the required planet points, you will be given the opportunity to choose a restaurant from this franchise, where you can take over the position of chef for a month with your own team, with the option of securing a franchise option for your own project from the StillintheKitchen restaurant chain as a franchise for the future with the network participants. Good luck sharing your culinary skills with each other on the StillintheKitchen network and further success in the future with other users from the network as a community, to set up your own restaurant as a franchise and thus achieve success with future customers.

## **No.899 RambooHo**

No. 1 In this game you have to try to do certain things with RamBoooHo, your game character, and to fool the other online players in order to have fun communicating with them, this means that you can log in to RamBoooHo and use the face embellishment distortion vector point function to modulate your own face and distort it in all imaginable directions and thus change it, while accessing the free face database of the network and your own photos from your free database provided

No. 2 You can select other facial parts from other users nearby or in the surrounding area or generally from a selfie database category in your face, which is divided into vector points, and integrate them individually into your facial vector points and then adjust them in all directions or rotate and move them, as well as distort them and try to adapt them optimally to your face using the program's AI.

No. 3 Once you have modelled your face and made it funny, use the face search algorithm to search for other users who might match your face and challenge them to a private duel. In the duel, you must use your above-mentioned character RamBoooHo to deliver a short, medium, long, soft or hard punch to the vector points of the face of the respective online user that you have identified and challenged, to the individual vector points that appear on the face at the right time, in order to get points for the hits. Punching is timed. The online user who has achieved the most correct and optimal hits in the duel by punching the individual vector points of the face with precise accuracy wins the game and gets the face of the online opponent sent home as an edited HD photo as a trophy, so that you can make fun of it or show off how good they were at the RamBoooHo game.

## ***No. 900 EdgeStoneLove***

No. 1 In this game, you try to crush and dismember certain love stones from the program or a female online user single who has selected you by radar in your area using gyroscope technology at a specific location. You choose a specific individual hand from the universe, for example that of the Babynator or Terminator, or you choose a category where you can choose a specific hand from the entertainment industry, see music, film, sport, industry, gaming, politics, economics, etc.

No. 2 Then smash or pull the smartphone, jerkily but carefully, downwards to the ground and pull it up again, gently but with power, this will allow you to hit the selected stone of the female single that she has placed for her, in order to hit it, and then after hitting it, you can immediately communicate with her using your smartphone via voice or text and find out about love. No. 3 If you were able to hit and crush the love stone in the right place or position on the stack, you will receive, in addition to the communication, the telephone number of the picture of the female single from your area or surroundings. In addition, you not only have to hit a stone with your individual hand using the smartphone's gyroscope technology and open it by hitting it, but you also have to crush the other love stones newly placed by the female single in the running time in order to finally get the single's telephone number by smashing the love stones that are to be hit individually in the stack, in order to finally invite her on a date. and bring a gift from the application program, namely a pendant of a love stone that she will never forget

## ***No. 901 AdrenalinEngine***

No. 1 You click on the button A. E in YouTube, now, at the right time, a song is played that activates the hidden adrenaline in your body, the principle works on the basis of your weekly schedule, which you constantly update daily with your emotions or processes in the database in YouTube with the help of AI

No. 2 After a week of entering your weekly schedule, click on the A. E button and now, at the exact or real time, a song will be played that will shake you awake and possibly trigger a goos pump in you and release your hidden adrenaline to make you feel better

No. 3 If you have activated the button and have not felt an adrenaline rush, the YouTube network can help you by providing other users with their weekly schedule and then linking and comparing it with yours, so that by clicking the button you can find the right sound on YouTube that will give you that adrenaline rush in your body in the exact and real time.

## **No. 902 Ziemniak**

You click on the button called "Ziemniak" and this will put together a so-called time destroy playlist for you, for the exact weather and temperature feeling, which will help you, if you need to wait against the clock, to make you forget the time by pressing the "Ziemniak" button, triggered by the playlist. This means that the playlist tries to override your inner sense of time. This is what is meant by this, meaning that when the playlist is played, the general time of the clock, which you should not pay attention to, passes faster than if you try to sit out the time without this playlist. In your free time you should drink at least 3 beers to unlock the subconscious for the emotions of the playlist. Emotions or adrenaline that are released trigger your sense of time in short steps on another level. This means that the inner clock runs faster than it is actually perceived and you no longer bored, to concentrate on your managed start for your project, in addition, your work flow will run more smoothly and quickly if you use the correct playlist, which the plugin "ziemniak" provides you with for free, optimize your playlist based on users who describe their review of their daily routine and compare yours at the same time, with the option to switch to other playlists in order to activate a better sense of rhythm for your internal clock, as an update to the playlist, you will be offered the right snack that should be consumed in order to supply your intestines, your so-called theoretical, second brain, with nutrients and with the playlist from "Ziemniak" to enable you to feel well so that you can increase your work flow or get it into sync more quickly, to ultimately let your time run by itself

## ***No. 903 Bisum***

The system protection is integrated into the wheels (8 pieces) in the number of chairs. There are 99 chairs linked to the system and these are activated in a rhythm and switched in parallel in real time. When a security engineer sits on the chair and moves with the chair to another computer system, the security engineers change places with the chairs in a random principle on the 99 computer systems, where an operating system called Bisum prevails.

The Bisum operating system is connected to a water system where pumps simulate currents and encode these currents into digital currents with appropriate and individual connections, a program code in machine language and form the basic framework of the system. In addition, unique plants and trees are an essential part of the system. The life lines of these plants and trees have previously been studied under the microscope and digitally recreated. These digital life lines are brought into individual connections with digital wind currents and bind together to form a 2D and 3D construct where anchor points connect these life lines and machine code is encoded on the life lines. The anchor points that serve for the connection are connected to the wheels of the chairs, see the principle described above. The graphical user interface is therefore invulnerable to hackers and is used and operated graphically as a 3D globe. You can tap on areas in the 3D globe, zoom in and from there, use drag and drop to handle and manipulate data, start mini programs and applications and define other system connections to controlled devices.

Through Catarinka technology, they incorporate the color philosophy of the glowing lights of the Earth's orbit into a digital calendar system and compare the light inputs and outputs of the respective area ratio seen on the square meter and, by checking, generate an AI that can additionally protect the user interface of the system.

## **No. 904 Gate**

The process, with the longstoryshort button, can be used to offer and summarize news texts and any text composition, such as Wikipedia and encyclopedia entries that offer a text that is too difficult for you to understand, in structured bullet points and simplified language. For this purpose, an image language is offered from the summary using AI and suitable video material is found and prepared on the Internet so that you can understand it quickly and easily. With the help of the community function, you can get experienced users who are online to help you communicate in live chats about these text compositions from the Internet, in the live chat and get help from them. In addition, the button uses soft, medium and hard touch to structure the following options for declaring the importance of the information in the text. Soft is marked with a color that is easy to understand, medium touch with medium importance and a separate color, and hard touch with high importance with a signal color. Depending on the importance, video, image and voice material is of course also offered that matches the importance. If you press the colour-coded text using soft touch, an internet search will be started to find similar topics in order to find out more about them. With medium touch, the search will then search for articles of medium importance on the internet, and with hard touch, for articles of higher importance that match the selected text. With the magazine function, you can save these texts and the suggested images, voice, articles in a digital magazine for your sustainability and access this at any time. You can also exchange your magazine with other users from the community and view other magazines and search for news with multimedia content in them. The digital magazine can be streamed to large screens, such as televisions, to get a better view. Individual parts and sections of the magazine can be transferred to social networks and discussions can be held about your multimedia contributions in order to stay up to date.

## ***No. 906 Fangnagel***

You must try to catch different and individual flying nails with your digital glove and, using the switch of the appropriate hammer, smash or knock them into the correct openings or holes using the principle of the smartphone's gyroscope. You have caught the individual nails with your glove and thus collected them. Now you use your smartphone using gyroscope technology and make a hammer knocking movement, i.e. from top to bottom, with the smartphone and possibly tilt it to the desired angle with the selected nail for the correct hole. After each successful hole, make sure that you select the correct nails and use all of them in the correct holes. The game is timed. The person who hits the most nails in the correct holes wins the online battle with a challenger from the internet team in your area or surroundings. Try to beat all challengers from other emerging environments to climb up the points ranking and ultimately participate in the international championships.

## ***No. 907 Ice Throw***

You have to form an individual ice ball on a floating ice spritzer, which moves individually depending on the weather and wind conditions, and try to throw it onto the next floating ice spritzer platform, into a catapult and then into a bucket, thereby loading the catapult and keeping the ice ball in use, in order to hit the next ice spritzer, into the next catapult and then into a bucket using the catapult, controlling the soft, medium and hard throwing techniques. The app is activated with every ice spritzer, which is correctly reloaded with the ice ball and opens in multiplayer mode with random players who have registered for the app on random smartphones. When the app opens, they must aim the catapult at the next ice spritzer platform and load the catapult with soft, medium, touch and try to hit the next ice spritzer platform as a random player selected from the app. In short, this is a massively multiplayer online nation game that can be played against other nations or the whole world tries to play this game together until a certain distance has been reached. The aim of the nations is to reach a longer and permanent distance with the ice ball in order to win the battle against another nation that is challenging them. Stakes are negotiated in online money amounts in advance before the game takes place in the nations battle.

Plus, in response and extension, various ice balls are filled with chemical formulas, through which throws whirl the Formula inside the ice ball and when it falls into the bucket, it connects with another chemical formula, which then links and is forwarded to the next platform for reloading. The goal is to create a chain reaction, code it and examine it under a real microscope in order to possibly obtain a new chemical formula from this game rhythm in the future and ultimately study it.

## ***No. 908 color mod***

I click on the Color Mod button in my Internet browser and get websites that activate or deactivate me in the morning, at midday and in the evening. This means that the Color Mod button searches for websites according to color philosophy to match the daily rhythm of your search and gives your subconscious a positive energy that encourages you to read and understand the text of the website better. The websites that appear after your search make you either fit in the morning, neutral at midday and tired in the evening. Don't forget to activate the search term with soft, medium, touch on the Color Mod button. To deliver exact and correct search results, Color Mod searches for colored vector points that are located in the vector points of the letters, as well as in the graphics and links.

## **No. 909 Volcano**

### Volcano

You hear a song on YouTube and start volcano with the saying volcano move, now transparent 2 sequences appear on the playing video, they sing, hum or warble or whistle into the microphone of their system and try to match the sequence to the original, if they succeed, vector points are set at these individual points and these are integrated into the babaDoc program

### BabDoc

In this game you have to run through the fields and the shema of chemical symbols, these appear randomly on the playing field, control the connections on the lines and activate them when you have run through them and throw the ball into the basket, for each basket you make this chemical symbol is activated on the playing field, now try to activate other symbols or the opponent tries to activate a different symbol by running through the shema of the symbol and sinking the ball into the basket. Chance should decide which connections are activated or not, it can be that the player only partially activates a shema and the other player also only partially activates a shema and only then is the ball thrown and hit. If it comes down to chance, they can use the various random shema activation compounds and make them boil with real animal noises, and then study whether other compounds in the chemical phase under the microscope produce a new chemical symbol by chance. This must be technically examined and successfully researched in the future. If the research is successful, these randomly generated compounds of the new or linked chemical symbol can be used in the pharmaceutical industry for the research of new plant seeds in order to obtain an extraction from the plant that can be used for medical purposes on sick people and has a positive effect on an individual disease course in the future.

## ***No. 910 Mojefroh***

Personally, I go to a grocery store and scan the QR code on the price tag with my phone. A Love Radar automatically appears in the mojefroh app, with circular food products that are recommended for a dish from the community calendar, whether it is vegetarian or not. I search for the recommended products and receive points after purchasing these products. If I have collected enough points, I receive an invitation to the mojefroh restaurant, where I will cook a dish for the community members of this platform that was recommended to me by the app when I was shopping. These restaurants are financed by the food manufacturers, through advertising or their own capital. If a franchise is created, in the future individual customers from their local area or surroundings who normally eat at the franchise restaurant will pay.

## ***No. 911 BluppaBlop***

Through underwater pumps, in the underwater world, positioned in a rhythm and scenario, like in a spider web-like system and with the associated ultra micro underwater cameras, which record the flow behavior and its exchange of water in the system, these recordings are intended to serve to support molecular chemical formulas in order to improve and optimize them, so that irrigation with hydro minerals in the plant world can be optimized and improved.

## ***No. 912 Undrollar***

The micro sound chip is charged and controlled by animal sounds from the animal world and integrated into the microscope, where the color chemical molecular particles of individual colors and their spectrum are made to dance by the sound noises of the sound chip in order to develop an improved and optimized color for the printing of banknotes, for example in this case.

## ***No. 913 Ongbak***

You put a modular battery under the conventional sockets for safety in case you no longer receive power from outside your living space. These batteries can be charged with your running devices or externally. For example, if your power goes out, you switch the battery using the green button on your sockets and activate the alternative power source to get all devices back up and running. You can also change the batteries and keep them running at all times.

## **No. 914 LeChipmunk**

They record the colour philosophy of the glowing lights of the Earth's orbit in a digital calendar using the Catarinka camera.

System and compare the light inputs and outputs of the respective area ratio seen on the square meter and generate by checking an AI that uses this chip to life can be constructed and controlled

## ***No. 915 LastActionHero***

You control a character named "jo" in this automatic, free run game. You try to collect digital hearts from the single men displayed on the love radar on an individual route that you decide to run yourself. These , to get close to the hearts are used to cover the needs of the single men displayed on the love radar. You collect these hearts during the run and in doing so uncover the transparency of the available faces in the love radar to see which type of face would suit you. For example, if you have chosen the drama, action, sci-fi or comedy route, transparent faces will appear on the love radar during the automatic run. As the hearts are collected, depending on the face, you must collect a certain number of these digital hearts while you are running the run and can be topped by barriers and obstacles in order to display these transparent faces. Jo also collects funny weapon icons to remove these barriers and obstacles and emerging opponents, i.e. single women who play this game in real time from the Internet, from the run and take them out of circulation in this example. Try to reduce the other single women and their energy with your funny weapon systems to make them run slower, thus preventing them from getting to the hearts on the track.

Try to collect the perfect number of hearts for your single man you like in the run with Jo in order to unlock him. Be aware of the obstacles that can change your character individually. There are various emojis in individual shapes on the track that prevent you from consistently mastering an optimal run, or you can improve the run more effectively with the emojis on the digital track. To let "Jo" run, the single men have to go jogging in real time and reach and run certain speeds in a certain time, while also overcoming a distance set by "Jo" in the real world in order to charge "Jo" with energy so that she can continue running in the game so that the game is not stopped. Once you have managed it with Jo and unlocked a charming face, the game stops and you can exchange and receive messages with him in pause mode and possibly arrange a real meeting with this person in the future and fall in love with this person. In the future, when you have found a match with your husband, you can design and create new tracks in the Love Design Mode together with the other matches who have fallen in love through the game.

## **No. 916 Catarinka**

You have to try to target different individual areas in reality with your notch AI camera, for example a flower. Before you photograph the flower, individual questions with bubble AI information from the online library lexicon appear. Try to answer the question about this image, i.e. about this flower, using the bubble AI information cloud lexicon and save the image in your Catarinka cloud search engine. In order to set up the Catarinka search engine, many images have to be taken and their questions answered with the help of the AI in order to create search algorithmic information. Catarinka combines all images with their background information, i.e. the answers and questions and pictorial colors and objects and vectors that are in this image and that could match each other, into a construction, i.e. an algorithm, in order to set up an alternative search engine that will be built on the principle described here in the future.

## **No. 917 BabaDoc**

In this game you have to run through the fields and the shema of chemical symbols, these appear randomly on the playing field, control the connections on the lines and activate them when you have run through them and throw the ball into the basket, for each basket you make this chemical symbol is activated on the playing field, now try to activate other symbols or the opponent tries to activate a different symbol by running through the shema of the symbol and sinking the ball into the basket. Chance should decide which connections are activated or not, it can be that the player only partially activates a shema and the other player also only partially activates a shema and only then is the ball thrown and hit. If it comes down to chance, they can use the various random shema activation compounds and make them boil with real animal noises, and then study whether other compounds in the chemical phase under the microscope produce a new chemical symbol by chance. This must be technically examined and successfully researched in the future. If the research is successful, these randomly generated compounds of the new or linked chemical symbol can be used in the pharmaceutical industry for the research of new plant seeds in order to obtain an extraction from the plant that can be used for medical purposes on sick people and have a positive effect on an individual disease course in the future.

## ***No. 918 Chophead***

In this 2D basketball game you have to try to control the game with 3 characters. The highlight is that you collect different emojis on the field or court to change the character's ability in real time. Be careful which individual emojis that are thrown onto the field by the fans you pick up, as not every emoji has a positive effect on the characters and their ability. Run around and collect the negative ones to change your character in real time during the game. The character's head changes its design after collecting the individual emoji so that the opponent can plan how to react to them in the game. For each basket made, the emoji charging bar of the fans is positively charged. For each basket discarded, the negative emoji charging bar is charged. When these two charging bars are full, the fans throw these individual positive and negative emojis onto the field. Ultimately, the game is played against time and points. The player who has the most points at the end of the time wins the game and can start a new duel online with other users from the Internet.

## ***No. 919 Chipmonkey***

You control a monkey called "Chop" through a village that you have chosen on Google Maps 3D. You have to collect individual bans in different sizes and colors on the different digital streets on the streets of the village within a time limit, all from a bird's eye 2D or 3D perspective. The street radar shows you the next street where you have to go. The goal is to collect enough bananas so that your Love Single Radar is activated. If you have managed to activate it based on a certain number of bananas collected on the streets and paths and in the required time, your Love Radar will show singles in your vicinity or surroundings that are freely available. To activate them, you have to click on a single and you will be switched to the place via Google Maps 3D where the single is located and you have to break the record of the single that was set. Whoever collects the bans in their area the fastest in the required time, have you managed to break the record? then they can contact the single via communication channels and talk to him and exchange pictures, ultimately it is about getting to know singles in their area or surroundings and getting in touch with them via this described task and its principle.

## ***No. 920 Zeus - No Problemo***

This hardware interacts with Dreamcat+ and its music platforms, it refers to, at the right moment, using the Zeus trident adapter, which also serves as a microphone, finding the freely available screens of the artists in the video at the right moment to vocalize, singing them accordingly in real time, gaining points in battle mode against an opponent, defeating them depending on the chances screen, vocal awarding, the screens where notes appear and the goal of singing more points to the same sequence as your battle opponent tries to imitate in the split screen. Anyone who wants to double their points activates their dance mat called no pro-blem and has to dance to the colored points won, parallel to the color on the field, similar to a game called Twister, these points in real time in the same color, in order to possibly double their points. If they don't succeed, all the points won by imitating the sequence of the song are lost and they lose the chance. They get a new chance on the screen until the game, i.e. the song on the new screen Point adventure, singing along to the sequence with Zeus microphone, gives a new chance until the song is finished. Ranking list The best in the month receives a ticket for a concert live or online, the loser pays a small amount to start a new battle, a small individual amount to the artist to beat the game on a different song. Collect enough points to get the win coin and your points, a ranking position, and ultimately to be among the top 3 users in the championship at the end of the month to receive the prizes, namely the invitation to a live or digital concert or, in the final mode, to take part in an interview with the artist about his song or album in which you played and to experience it live with him.

## **No. 921 *HeturnShemove***

The last statements of the message in the topic are made available to the respective What's App person as a 6+ word circle rounding selection process in order to remember what was last, now from the view in the status of the person who was clicked, is made available to them as information, the person clicks on a word and they are given a minimal summary of the last messages in advance, as an example, before they get back in touch, as a text plus image AI appearance example. This should help to get back into the conversation if you have chosen the right word from the circle rounding selection, mentioned above in principle, or even activated two to three at most. The minimal summary can use the plus button, expanded in text plus image appearance form by the AI, to access longer periods of the context and reflect it in a simplified way and play it back in soft, medium, hard scenarios to simplify the timeline of the content and the topic, see text as standard and plus image AI appearance addition.

## ***No. 922 Subtripis***

You tap a letter on the smartphone keyboard and hold it down, a circle shape appears, from this circle shape you have to choose 6 words that build on the next letter, provided you have already pressed it, and on the next letter too, the AI keyboard remembers the 3 letters and helps you choose the right word choice before you have written out a word, you just have to tap a letter, the one after that and the next, you tap a word from the circle shape in the clipboard, and from the next letters a word from the next circle shape, and from the next circle shape the next word that comes to mind, these words are stored in the clipboard and then appear, which are used according to the meaning of your sentence and help you with the help of the AI sentence formation the possibility of recognizing a sentence from its meaning in advance or help you to construct and form a concrete sentence in summary on the topic.

In addition, the AI asks questions about the selected word sequences, i.e. 3 in this example, via the library selection menu. You can answer these using the same principle as described above with the answer selection words that appear and be happy to have a complete, coherent sentence written out according to your word selection beforehand.

## ***No. 923 PlasterPlan***

You place a sung text line opposite your note position, for example in parallel mode of 3cm in written form, to derive hidden connections between the vector points of the letters and notes that are on the lines. The distances between the vector points of the letters and the note symbols are individual and can be marked as a measurement. The measurement is then used for the following function in the future. The distances that were measured can be used as a guide for programming code and various programming functions can be integrated into the distances. If you have derived the line of text and its note position and left programmable code at the intervals, you can now go ahead and do this with the entire text. The aim is to set the intervals in relation to the mind using an AI and spin the intervals where the programming code connects to each other and makes sense on a three-dimensional form and turn this form inside out with the construct of the intervals and fill the empty 3D form with intervals and its code lines and give the form an individual rotation using simulated fluid flow. This principle is used to program the KWIAT platform and sets new standards in future for security and data protection against misuse of the platform and its content which is made available in real time (see KWIAT).

## ***No. 924 Segarek***

Your alarm clock, set the option with the face mode, time scroller, choose your category from filmographies. In the morning the alarm clock rings and, for example, Fantomas appears and shocks you with his morning alarm clock face + a good start to the day slogan. If you like it and it cheered you up, send this Segarek Reel with a feedback comment as a reel in the social networks of this time and wait for reviews from other alarm clock users who have taken your reel to get up happy and alert in the morning.

## **No. 925 Scarabaeus**

You control a scarab on a pyramid where each level of stones rotates on its own axis. You collect sun symbols on the stones of the rotating pyramid and try to get to the top of the pyramid with your scarab within a time limit in order to give the sun symbols to the eye of the sun god Rah. Meanwhile, your opponents try to do the same on other pyramids. The one who has more sun symbols to give to the eye of the sun god Rah when he has made it to the top of his pyramid activates the eye of Rah, which then shines a dark light on the next, closer pyramid and darkens the lighting conditions so that he cannot easily chase his scarab up to the top of the pyramid in the darkened light.

Try to darken all possible pyramids near you in order to make it more difficult for the other players to move with their Scarabaeus. You receive a heart as a success if the opposing player does not manage to darken you and does not use his light to conceal you from the pyramid's orbit. The heart you have won activates a digital love radar in your vicinity or surroundings and searches for like-minded single players, women who have also won a heart. You can now start a battle with this woman or talk to her about single life to get to know her better. You decide for yourself whether to play or fall in love. The more hearts you have won and the top 3 players in the rankings at the end of the month, the more you will be treated to a trip to Egypt, which you can experience in real life. The Scarabaeus game can also be applied to the following buildings, for example Pisa, the Eiffel Tower, and other technical buildings that are a feature of their country. For example, the best player from Egypt can challenge a woman from France, or a man from Germany can challenge a woman from the USA.

## **No. 926 Whoomaku**

No. 1 You use a radar system on your smartphone, in a non-binding vicinity and surroundings you look for hidden boxes as digital raw materials, if you see a box on your map, go to it, answer the question that is asked to you and the box where the digital raw material is located opens for collection, try to unlock all the active boxes in your week in order to exchange the collected digital raw materials in your kiosk, which sells cards in the conventional form of the raw materials, with your collected ones

No. 2 If you have collected, for example, wood, iron, gold, stone, water as digital raw materials, you can exchange these for raw material cards at the Whoom Kiosk in the real world. You use these cards to build your village on the real board game with the points that are on the kiosk card for each raw material. In this similar Pentagon board game, it is about building a village peacefully and without aggression with the collected point cards of the raw materials on your randomly placed fields.

No. 3 For each village you build, you have the option of requesting rental income in the amount of real digital money from other players, as long as you have built your village and a player has reached your village field, with the digital real money you have earned, you can continue to unlock your radar environment with a higher Reibus via in-game purchases in order to make new boxes visible in other environments.

No. 4 As the game progresses, you must protect your village with creatures before your village is digitally challenged by other creatures of the players. This means that you try to unlock creature coins in the other boxes by answering the questions correctly in order to be able to open the box as mentioned. Once you have collected the creature coins, go to your whom kiosk and exchange them for creature soldiers. A certain number of coins must have been collected in order to receive a certain creature soldier with his individual skills.

No. 5 If you have acquired this creature soldier from the kiosk by searching for the unlocked crates (coins) in exchange for the player card, you can now return to the game board and place this creature soldier on your village field. If a player comes across this creature soldier, the back of the creature soldier on the card must be scanned and a live battle will take place on your smartphone, from which the other player will also scan a creature soldier and pit him against your online smartphone (pokemon battle). If your creature soldier wins the battle against the other creature soldier with his abilities, you can keep the other player's creature. If you lose, you have to hand over your creature soldier and not pay any digital real money rental income.

No. 6 The aim of the game is to build the most villages in the Pentagon and earn the most money in order to become the ruler of the map in the future

## ***No. 927 Whoom Woda***

They squirt a jet of water from a hose into an empty container at an individual speed, amount and volume. The fizzing of the mineral water creates, as you know, water bubbles that are connected to one another. The different types of water bubbles are recorded with an ultra micro slofie camera, and the addition of chemical additives that are integrated into the water bubbles with an adapter can potentially create a new chemical chain reaction compound, which is recorded in its flow under the microscope camera. Later in the laboratory, an attempt is made to interpret the different compounds. The adapter is also based on an ultrasonic frequency sound chip that uses simulated animal noises from the real world to make the water bubbles dance, and thus possibly after various experiments.

Which can change the molecular structure.

## ***No. 928 Whoom Spintch***

You activate whoom Spintch on your television using the remote control by aiming at the face of the person speaking on television or the presenter of your program that you have chosen. A circle appears with up to 6 words around the face. The words of the speaker speaking change in the circle. You click on one of these words with the remote control and activate it in the news translation bar. Click on as many words as possible that you don't understand. The news bar displays the words in a news ticker at the bottom of the screen and translates them into the language you have chosen that you want to learn. For every word you say into the remote control, what you see in the news ticker and hit the vowels of the word and pronounce it correctly, you receive points from the whoom Spintch extension. You collect these points until you have collected enough. After a while, you get the option of exchanging these points for a points card. This points card can be used as a discount card in your local or surrounding shop to purchase products at a reduced price. In short, this means that you try to learn languages, collect points, and are offered cheaper products for your learning behavior, and with the points card you can purchase these at a reduced price. In the ranking of the best students of the various languages that you learn in this way, you naturally get new multimedia access to foreign films, where the principle can be applied in other ways.

## **No. 929 Whoom Price**

To reduce the manufacturer's prices, open the whoom Price app. In this app, the manufacturer's seller, who sells Samsung products, for example, asks you to perform a punch out with them. In this punch out game, it's about competing against Samsung sellers in your area or surroundings to reduce the price of your selected product. All you have to do is win the punch out against the seller who is nearby or surroundings. The punch out game works like this: you choose the product you would like to buy. The deal is, if you win the punch out, you get the product at an individual percentage discount. If you lose, you have to purchase the product on a binding financing basis. The punch out game works like this: you see a clenched fist coming towards you. All you have to do is move your smartphone left, right, up, down using the smartphone's gyroscope to avoid the fist. If the fist hits you and you cannot dodge, your energy is deducted based on a charging bar. After each evasive maneuver, you can strike with a digital fist yourself. You can do this by moving your smartphone left, right, up or down. The person who took part, i.e. the seller and you, loses when their energy bar runs out. In addition, the decision to reduce the price or to finance the mandatory purchase is based on the time of the punch out game.

## ***No. 930 Whoom Yesch***

A Whoom cup, called "Yesch", is resistant to heat radiation, it can be filled with frozen main dishes from Europe in this example, such as pierogi, bigos, meatballs, vegetables, rice, and many more, which can be heated in water in the cup, in an air fryer and served to enjoy after programming the dish, on the air fryer, according to their quantity, to you on the day. For each day on the calendar, there are different cups with individual dish assortments to choose from. It is a quick way to serve your dishes to suit everyone on the calendar day without wasting time. This means that in the whoom Yesch app, you can design your own ingredients for the main dish assortments using digital emoji spices and ingredients from the library. Mix your main dish that special touch to make it individual. In the whoom Yesch app's online calendar, users of the app can describe their ingredients in relation to the dish assortments with their experiences and add emojis. They can drag and drop these digital ingredients and spices into their digital cup in the Whoom Yesch app and assign them to their cup from the calendar of ingredients and spices depending on their selection. They hope that on this day, with the help of the community, the user will enjoy their self-created cup in live preparation using the online library calendar function, for example on Monday. If it doesn't, then try out a new mix of ingredients and spices for your personal cup next Monday, which is then finished in the airfryer. You switch on the reviews of your taste and a vector point system and declare your taste status in the online calendar, along with personal information such as weight, height and your need for well-being.

## **No. 931 Jomango**

No. 1 In this online board game you try to build your digital village by getting to the fields and trying to build and construct it bit by bit with your credit

No. 2 As in monopoly, there are countless event fields that you can use to get money and bonuses to gain more credit. If you have built your village and a player comes to your village field, a duel ensues. It is about you having to defend your village. To do this, you have previously built fortifications and defense towers that protect you from the opponent's attack. While you are playing the game and come to your fields, you use your credit to build your defense and build it up steadily.

No. 3 You control your character in a circle and try to constantly improve your village and, when you land on the fields you have bought, use your credits to build a defensive wall to protect it from the other players. If a player lands on your village field, he can attack it in duel mode with a sparrow sling and various projectiles with the sparrow sling, provided he has enough ammunition in the time running up to continue the attack.

No. 4 Use the various event fields to get more building money, as well as bonus materials for your defense. If you have survived a circle round, you will receive an amount of money in your account to spend on building your village and defense if you get to your village field with your players to take part in the active construction.

No. 5 The aim is to slowly destroy and capture all the villages that have been built on the circular playing field, as well as to take the money from your opponents by completely destroying them.

No. 6 To collect additional credits, you must go into the real world and look for digital money bags on the radar and find them in a certain time using walking or jogging mode on a certain route with your smartphone and record them with your camera and integrate these individual amounts of money into your digital game. You can also come across enemies on the routes, which you can then try to destroy in a duel battle on your smartphone. This gives bonuses and rewards for building up your defense systems. This is counted as coins. Try to collect enough coins and money bags if the game challenges you to move into the real world.

## **No. 932 ShebackLove**

You target a woman on Pinterest who is available to you as a photo, with soft, medium, hard touch you open a first, soft, second medium, third with hard touch selected circle, target circle border options selection menu, the first is a dart field where you then release the pressure and use a soft arrow to mark the spot in the photo of the woman you like, secondly with medium, a field opens around the dart field where you can direct your voice to the selected point that you have again targeted with a dart field and bring your loving comment to the point in your language to her, which is then sent as a comment, thirdly with hard touch, you target a point again with a dart field mechanism as a third circle border menu option the fields and the AI suggests suitable, loving and charming statements spoken to your voice, clothing items that you can send to the photo woman, here in the example, as an option, so that she can possibly be dressed like this in the near future to have a nice day to experience. Marketing Slogan Shebacklove in Mind Plugin for Pinterest possible dating consequences in the future perhaps hoped for with this submission of this comment system principle.

## **No. 934 Stripe**

You have to try to digitally recreate a given face of a friend or one of your posts on Facebook using digital tools in a certain amount of time. To do this, you will be given the necessary help from the stripe Paint AI to bring the image to life in newly constructed views. This is based on and works as follows: for example, I am trying to recreate the hacky face of the stripe gremlin while I am making this post, which I liked for being great, available to me in the future, to give me the chance to design my own stripe character using the stripe paint AI and to link my face there in order to integrate myself there in my own way, in my opinion, according to the stripe gremlin's way of representing myself, and to leave you a message with the special voice renderings mouth function for the constructed image, namely with a creative saying, so that the post in the Comments should no longer be boring in the future.

## **No. 935 WhoomBet**

You are sitting in a pub or bar with live sports broadcasts being shown. While the sports broadcast is on the channels, a whoom Bet sound is generated on the television. Everyone who has registered with whoom Bet receives a notification on their smartwatch or smartphone about the bet for the sports broadcast. After you have heard the sound from the television and received the notification on your smartphone or smartwatch, you click on your team and place a bet on your team, which may win. This amount is transferred to the whoom Bet machine, or rather the vending machine. After your team has won, the pub or bar owner can give the amount won from the machine to the audience in the form of free money, offset against the amount won by the winner. Those who have lost can possibly be invited by the winners. A percentage of the profit goes to the pub or bar owner, so that he also has to earn something from it.

Or they leave the pot of winnings in the machine and bet a value from the machine the next time there is a sports broadcast to make the game more exciting again, or they go all in and lose everything to the other betting team powered by whoom Bet, your luck that's luck. Let's assume that both teams join forces and can digitally build a digital village in the whoom Bet online game with the help of the winnings of both teams from the money they have earned, a village with a bar and several pubs in order to create competition, other teams from other bars try to create competition with their village, including the pubs or bars, in the whoom Bet game online by trying to digitally attack the village of their pub in which it was created in the digital whoom Bet online game and first take over the bars and pubs there, in order to ultimately take over the village online, in order to steal the winnings from the other pub or bar.

## ***No. 936 Haarway***

They use the hair of selected individuals, i.e. women, and record it in a 3D visually recorded construct with a newly developed camera while different air currents change the hair individually in different directions. They then put this construct under the microscope and with the help of an AI and the hydrogen H<sub>2</sub>O molecule, they couple the bonds that split the H<sub>2</sub>O molecule and create an additional molecule purely artificially in between in order to give the hydrogen energy more energy, to strengthen it and to give more yield to this energy.

## ***No. 937 Malinka***

This engine called "Malinka", which could be used in industry, is based on animal noises that set a pump rotor in motion in individual rhythms, which means that every noise that can be instrumentalized in the pump gives a force to the vector points of the rotor, suitable for feeding the energy to the desired location in order to operate a machine with energy in a concrete and economical way. In short, this pump controls in real time only the demand that is needed, can in turn generate a mass storage of energy, based on the sounds studied from our loving animal world, as momentum to generate energy for distribution with the appropriate sound chip and individually control and explicitly promote and distribute the energy to sensors.

## ***No. 938 Marvjong Juma***

First, they code the light switching on and off moments in their city or country for security purposes. The first layer under the train is used to connect the lower layer of the track on which the train, called Marvjong, travels. The track is decorated with artificial mini diamonds in color models of 16.7 million colors. A reproduction is made to the drive of a pump that can quickly return individual reflected colored light to the pump from the light-coded switching-on sequences that are derived from the lower layer of the train to the lower track. In the pump, this light is bundled separately and, through new lenses, the energy of this light is returned as a laser beam to the drive of the Marvjong train at the front in the middle and at the end of the train for further processing in order to use the energy of the laser beam to drive the new vector light motor to accelerate the Marvjong train.

## ***No. 939 Cinalf***

In this new Reels scenario, your voices are synchronized with Hollywood scenes on Facebook, from your point of view, with subtitles and your voice, to give the scenes a new touch. You choose a year from an individual time scroller and you are then shown scenes from that year from funny and different genres, scenes from Hollywood films, so to speak. Now you click on the video that appears and read the subtitles with your voice. The video is then filled with your voice and can be passed on to your friends and distributed on the network. The highlight is that you can also learn another language through these scenes, as the videos are offered with multilingual subtitles. You receive points from Facebook if you can correctly repeat the subtitles of the videos you have chosen and play them back synchronously. You can collect these points to exchange them for online video store films that are available, and you can then get your film for free, be it as a DVD or digital download, which Facebook uses to trade in the points you have exchanged.

## ***No. 940 LeMond***

This dating site is based on our zodiac signs, so when the zodiac signs are visible in the sky at night, the app activates and searches for active zodiac singles in their area, this time only female people who match their zodiac sign according to the ancient history of the Greeks and astronomers, and binds them in the zodiac sign radar into a connection that can be accepted by the single if their facial photo, which is compared by the AI with that of the single, is compared with theirs and looks for similarities that could match each other. To get in touch, you have to go outside when the zodiac sign signal from the app and collect digital stars with your smartphone and when you have collected enough as requested by the single, you can contact her via live chat using different communicative forms from our technology world and start a conversation.

## ***No. 941 Alfomizer***

No. 1 In order to provide you with an individual, personal user interface that will allow you to work better on the computer, you only need to answer your personal data about your health status or the files about your experienced illnesses from the health insurance company and your focus on personal needs in your life using an AI question before starting the user interface.

No. 2 After answering, the user interface system, newly designed for you with the color philosophy and color spectrum, starts with a new costume, this is intended to activate the hidden color synapses in your subconscious in order to work better on the PC and feel good.

No. 3 You have the opportunity to use a new design every day, which motivates you to work longer and better on the computer. You can use 3 designs a day. After a certain period of time, you will be presented with a suitable design based on your own rating scale, which will help you fall in love with the system and improve your workflow. Appropriate instrumental music will also be suggested, matching the design, which could play in the background of the newly created user interface, thus generating a plus and motivation to increase your workflow in your subconscious.

No. 4 If you notice that you have improved, then rate the designs for others in the computer community and leave your serious review for other users, by using the same design, a friendship can develop between users and communication via emojis and voice messages to expand and optimize the system in the future.

## **No. 942 Solariz**

No. 1 To get a secure foundation for a super protected operating system, you have to use nature, that means you study the life lines of the various individual trees and the various plant strands of individual plant species and record them with an ultra micro camera. Once you have drawn the lines, you put these lines and strands together in a streamline system to form a spider web. Each strand and line has a different direction and size and can be categorised separately using colours. You then insert machine code onto the lines and strands, which, with the help of the programming AI, searches for the lines of code in the spider web and can find links to a command or argument and thus create a code paragraph. The compiled code then becomes a function, command, argument, etc. Created and used to visualise a graphic, for example an icon or a user interface, be it in 2D or 3D, it could be a digital window, or a curved 3D surface with which you could control the operating system. You create directories and move folders back and forth in these directories using drag and drop, start programs in these areas and control the system, which is built on a new graphic, these areas with their directories and data folders, in 2D or 3D. visualization.

In addition, the spider-like web, which is built on a 3D sphere, is simulated with digital water, constantly shaken and randomly rotated back and forth with currents, as well as variably varied in its individual directions, which changes the structure in order to maintain greater security in the future. The planetary system serves as the user interface; each planet can be controlled in 3D, as you should be familiar with from Google Maps 3D; you can select a planet and fill it with data, be it Pluto with videos, Earth with text contributions, Mars with music, Neptune with applications, Saturn with images, etc., depending on what data you have available.

You can zoom in on each individual planet and define locations with areas; you can store your data in these locations and areas, which will be protected according to the security principle mentioned above. You can also simply swap individual data planets with friends using drag and drop and thus access new data that you can store on your unused planets. You can search in the system displayed in the split screen or use the zoom function to search your friend's planets in the split screen for data that you might need and save this to your blank planet. You can also stream your operating system to your television and control the system with your remote control which was specially developed for this purpose. You also have the option of accessing social networks with your social media planet and viewing the latest news from there and then storing it on your planet. Once you have searched through your experiences on the television with your special remote control and saved lots of new messages, data and multimedia information, you can then give this remote control, on which the operating system can be saved, to your friend (in this case your neighbor) and thus give him new information from your search.

## ***No. 943 Strudel***

You scroll through the posts on Facebook, X, Instagram or other platforms of this type and can drag and drop these posts onto the swirl icon. Once you have dragged in certain posts, click on the swirl icon and your posts will be individually displayed in a category magazine in a new visual representation. You can exchange this magazine with friends and update it again and again, plus have it played digitally on the TV via streaming. You can also use this principle on Windows and have posts displayed as a magazine.

## ***No. 944 Nascolor***

The system of the most used networks, such as search engines and Social media platforms are searched based on your color policy and, based on your question, finds additional, appropriate and important, relaxing information for a good reading rhythm to help you relax more calmly in the rest of your life.

mode or to activate them more actively in the brain, this Plugin serves the Dobranoc Button and helps us with color theory passively or actively to optimize ourselves depending on the daily routine and daily rhythm procedure, what they had experienced

## **No. 945 Dobranoc**

You click on the Dobranoc button on Facebook, you are shown 3 to 6 friends with whom you have recently been in contact, you record your face in slo-fi mode, just before you want to go to sleep, and a request is sent to your friends in real time, if they theoretically carry out the principle as mentioned here, Dobranoc compares the facial expressions and creates a new face of them with a different facial expression in the evening, here in the example, the face shown is equipped with vector points and these are used to identify images, videos, texts, sounds, you have to click on the vector points in the order suggested to you and the appropriate videos, images, sounds, texts are shown to you in a timeline, which may make you tired and sleepy, if you have seen this timeline and the time has elapsed to view the timeline, then activate the additional adapter on your smartphone, this additional adapter emits relaxing effects for this named day after viewing the timeline. Light effects, such as a lamp coming out of your smartphone that matches your timeline, hope that this principle will help you fall asleep better. In turn, this model can be used to improve your memory and create a positive and active response in your subconscious to prevent you from getting sleepy.

## **No. 946 Raklamat**

You are provided with a database of many products; you take the products or the product you want to advertise yourself and link this or the selected product with the Pinterest image database and the newly created screenshot database the "dood", which consists of many screens from Hollywood films and can be used freely and without copyright. In short, the AI or you personally use Tiktok technologies to create a short video from the image database, a so-called Raklamat Reel, which is relevant to the product and linked to the manufacturer's information article from Wikipedia. With these self-created and real-time, personalized Raklamat Reels, you can advertise your videos with your own advertising on the "twinz" platform, YouTube or social media platforms. In order to earn money with your advertising videos, other professional advertisements must be implemented in your videos. They are integrated using a so-called "shark kick", which means that the professional advertisement is inserted briefly in between your self-created advertisement, in line with the transition and flow, which means that a screen could appear in your advertisement. If your self-created advertisements have been stimulated, using a shark kick, they will be redirected to the manufacturer's website.

You will be directed to the offer page by clicking on the manufacturer's professional layout and there you will find your offer for the product advertised in your advertising video.

## **No. 947 Twinz**

On this alternative video and image platform, you upload your personal videos and images. After uploading, you click on the "Twinz" button and the platform generates a Twinz Reel for you, using AI, based on your video and image that you previously uploaded. These Twinz Reels are supported and financed by advertising. The likes of the viewers are collected in a pot and the artist of the videos is allowed, if the pot profit exceeds the number of viewers generated by the advertising on his AI video, the artist must distribute this pot randomly to the viewers of the generated AI video in variable and individual stages. They are randomly selected. The personal video is not annoyed by advertising, so it remains in its raw state and can be personalized by you using Tiktok technologies, without AI, in order to get a fan base for your channel. The more subscriptions you get, the more viewers will see your Twinz Reel AI video and thus generate more advertising revenue, and as mentioned, if your profit is higher than expected, you are required by the platform's law to distribute it randomly to viewers in order to satisfy viewer loyalty in respect of revenue supply and demand.

## **No. 948 PimRod**

You use the new function on the Alf Watch, "pimrod", you test your pulse and in the vicinity and surroundings, the same pulse of a single is searched for and displayed on the love radar of the Alf watch, with a face. In order to get in touch with the person using the smartwatch, you must, as mentioned, have the same pulse, plus have melted the digital ice cube set by the female or male gender using the kilometers you have walked today, counted in step length, in order to activate the single contact mode, which the female or male single had set for you, so that you can contact him or her via the Alf Watch Messenger using the smartwatch. If you have managed to meet the requirements today and by chance your pulse is identical and resembles the same person you clicked on in the love radar and melted the digital ice cube, you can use the Alf watch messenger function to send her suggested poetic or romantic slogans, which must first be earned through the Alf watch. This means that you have to collect the slogans in the real world using GPS and implement them in your Alf watch. Once you have collected the desired slogans, you can send them to your single person and hope that you have chosen the right ones at the right time so that your single person is confidently swarmed around and the communication between you is effective. The conversation is limited in time, as the

Digital ice cubes are increasingly recovering and could block communication, so both parties must now reach a target length of kilometers set by the messenger the following day in order to be able to get in touch again. If you have collected a certain number of kilometers over a month, you can enjoy gifts from the manufacturer of the smartwatch, which means that you may receive free vouchers for a restaurant in your area or surroundings, so that you can meet there in person and get to know each other better. You can also take part in tournaments of love, which means that at the end of the month you can use the kilometers you have run in a battle for more kilometers, in order to unlock a bonus with the kilometers, in order to battle, you have to try to beat a person who is using your kilometers as stake coins in heads up in the old-fashioned but digital form. With the kilometers you have earned, you can exchange them for digital points and use them in your supermarkets near your home or surrounding area on products of your choice in order to purchase the product cheaper or even for free through your high accumulated points or to receive it for free. The products include, for example, food, technology goods, fuel prices and many other variations of shopping.

## **No. 949 PikmmhUp**

No. 1 You own a Samsung Alf Color Television and an Alf SmartWatch, you register with your health data using the Alf Watch function which collects this data in real time, plus facial recognition and ID verification

No. 2 You choose, for example, the sport of basketball, and select 5 players in today's, as yet unseen game. While the game is taking place, you can assign a hand or finger gesture to one of the previously selected players using the 5 hand gestures. The Samsung Alf Color Television of the future will then unlock a function, namely the addition of a color on which the hand gesture or finger gesture of the selected player is based. For each hand or finger gesture, with soft, medium, hard, touch, while you suspect that your player, whom you had declared, will sink the ball into the basket shortly before the throw, you place a bet for the positive throw. This means that I touch with my finger or hand gesture and activate the player who is currently making the throw. The Samsung Alf Color Television activates the player and assigns him a visible color for recognition again, to the selected player, on the Alf Smartwatch and for each finger or hand gesture moved, in the time. a bet amount is activated for the throw, the longer you move your finger or hand gesture, the higher the bet for the real-time throw of the activated player, which you started with your hand gesture or finger gesture to activate him for the bet on the throw

No. 3 You upload a certain amount of money to bet on the "Pik mmh Up" page and configure your bets using your soft, medium, hard finger time and hand gestures of the Alf Smartwatch for your chosen player, who is playing the game in real time, try to optimize your uploaded amount of money live, or to increase or spoil it in the worst case, feel the game, plus, you can start a betting battle against a simultaneously activated friend from your friends list at Pik mmhh Up and try to challenge your friend against an individual amount, which means whoever first earns a positive, designated amount in real time using this principle will be rewarded for his bet amount, the was individually graded before the game

## ***No. 950 Fubak***

In order to protect the joli Plontine search engine from other dangerous databases in the future, a so-called algorithm of the word found by the search engine places a digital transparent, individual sheet in an individual shape and color as a comma before and after the word, as well as above and below the word and decorates and decodes the found word with the algorithm of the sheets, the word into an instrumental beat that places a vector point at every depth, height and length in order to filter out an instrumental beat from the word. By inferring and sending the instrumental beat into the spider-like building system, a so-called protection is now implemented in the main algorithm of the knowledge database, which means that a code in machine language is added to each individual letter and its vector point in the joli Plontine search engine database using the coded instrumental beat.

## ***No. 951 Plontine***

You enter the form of your request into the search bar of your favorite search engine. For each written word, a question circle appears with the following question words: What, How, Who, What for, Why, Wherefore, Where, Wherefore. You select or click on the suggested question words. This means that for each word, you can select 3 question icons. These are attached to the written word plus the selection of your emotions, which you should add to the word by selecting an emoji, depending on your daily needs and mood.

For example, if you have searched for savoury products and recipes on the Internet, depending on which spelling you entered into the search bar yourself, and integrated the previously presented principle with attachment of the question words plus emojis, you will receive a new visual answer in the form of an information magazine to browse through, related to your question, presented in multimedia format on the homepage of your search engine joli in the future, you will then be shown videos, your own opinions, tips and tricks, images and articles related to your question and input in the search bar, which are presented in comparison with other users who are searching for the same thing in real time, so that you can get an idea of the knowledge about it.

## **No. 952 Winfried**

No. 1 You start the Winfried operating system. Instead of windows, you see curved surfaces that you can control in a 3D visual way, like a 3D globe. You can click on an area on the globe and a curved surface appears. In these areas are directories and icons with which you can move and connect data. You can control these icons by touch and drag and drop with your circular mouse pointer and use them to move to other categories and directories that you have declared yourself. Folders are shown as visual icons and can be filled with files. The system consists of instrumental beats that are linked in a spider web with vector points and anchor points. The programming code is linked to each other at each anchor and vector point in the spider web and can be updated again and again. Winfried also offers a so-called magazine function that you know from magazines. With this interface you can also control and operate the operating system. You can access the Internet in real time and use drag and drop from the Internet to fill your magazine with data and thus fill it with content. For example, you can go to YouTube and drag your videos, music, texts, contributions from YouTube into your operating system or from your streaming platforms and social media networks and other Internet sources. Winfried can also emulate other operating systems and, for example, Windows,

Integrate and incorporate Linux, Android and IOS into your system and display it on the visual basis of a 3D globe or a magazine. It is barrier-free and can be used and operated with any structure of the operating systems in use today. Because it is open source, the whole world community can participate and write constant updates. The 3D visual curvature of the 3D globe is operated in a similar way to Google Maps and in this way a new feeling of control can be experienced in various ways in the future with Winfried. You zoom into the directories and create locations where data can be saved via touch and drag and drop. Other users can also access their system, for example friends, save folders and files at these locations on the globe and fill them with content from their system. In addition, you can navigate through the world of the Internet with the visual 3D globe and see Google Maps, experience the Internet as an explorer in a 3D visual form of control and enjoy exploring the Internet in a new way and storing your data in your magazine via drag and drop that you might like.

## **No. 953 Ezip**

To create new content for a music video created by the AI, you drag and drop, for example, 3 to 6 videos from YouTube together. The AI recognizes the content that is being sung and creates a meaningful connection to passages that are linked to one another and matches the sung content to create a new song text. The AI remembers the video and image insights and creates a newly designed video for the new song text with matching images from the linked videos that you spontaneously put together using drag and drop. If that's not enough, the AI can access a library of books and search through the missing and special passages of text and draw inspiration from the text and language written in images. The AI also has access to a film library and to Wikipedia in order to optimize and switch on suitable transitions between scenes. The video created by ezip can be refined by you and adapted with effects and information updates. Once you have created the ezip video, you can post it online for editing and in the YouTube community and wait for feedback on how this ezip video is developing and whether it is being liked. The community can put the best videos selected by the audience together to create a mix and filter out a new long, short or medium text and make a paperback book out of it and make it available in order to create new knowledge and learn from it or to inspire yourself to develop a new video or text yourself and personally. The newly created paperbacks can be searched with the AI and at certain passages, AI questions are asked and must and should be answered by the YouTube community in order to establish an algorithm and develop a database in order to create an alternative to Google search, i.e. the ezip search engine, which will become a more useful alternative in the future than the conventional search engines as the community grows.

## ***No. 954 Mr.Jogo***

No. 1 You can use the following functions in this additional plugin for Youtube:

You can access a database of digital books and select one from the crime series from various categories, for example, and by clicking on the Mr. Jogo button, using the AI function, you can have the video AI with personal configuration create a short, medium or long video from the combined passages of the book and edit it. No. 2 You can select several books and have the AI of the button, Mr. Jogo, interpret a new story from the individual parts of the books and use the AI to create a video reel from it.

No. 3 You can also use Wikipedia articles and use the important information compiled for you using AI to create an AI-friendly presentation of the articles and their important information. This presentation can be assessed and refined and optimized in real time by YouTube users.

## **No. 955 Roschek**

The thumb, referred to as an icon, is to be used for about 25 representations, roughly determined, which could serve as an information bridge if you want to use it as a visual representation, the Face-book button, mentioned here, is used for communication between An ALPHABET and normal people, plus integration of sound specific to ordered representation of the option of transmission, the human transmission to be shown, through the representation of about 25 shown hands plus integrated finger optics, with the associated sound option not seen by others, spoken instructions from numbers from 1 to 25, accordingly to enable targeted information transmission.

Visually, the representation of the visible user is individually controlled by 25 variations of the invisible user, with sound instructions. You receive reciprocity with the options mentioned, a variety of buttons that you use, technically designed, to take and execute, the Facebook button, aka the button - Roschek, many different options for guidance from the supported AI, which helps you, through the 25 displayed and the instructions you give, to convey information to your neighbor, friendly or, for example, angry, in short words from the 25 human reference communication methods mentioned above with the remaining communication words to be used by the supported AI, to build up a visual delivery to the chat person or to inform them about the status of the personal diversity at the time.

, one

The thumb is also used to distribute folders and files for the Windows operating system. It can also be viewed as a family tree directory structure. It distributes data to directories using the functions described above and can also be used as a buffer and information streaming anchor. To do this, you must drag and drop your data into it and the thumb will then distribute it to the desired locations in the directories, where other thumbs can accept and save this distribution.

## ***No. 956 Aligator***

You can see the videos that appear in the right-hand column on YouTube. There is enough space between the videos to insert transitions. This means that when a mix is automatically offered by YouTube and the songs are coordinated with the content, a suitable transition can be inserted when a new video is started, which is offered, in order to create a flow like in a DJ mixtape. You also have a DJ console icon displayed between each video, meaning you can interact with the digital console and, for example, use and scratch your own transitions. At the end of the mix, you can save the mix and make it available on the YouTube network under the Alligator option and icon. The mixes can now take part in a character duel and users can rate them and ultimately distribute them personally to other channels. In addition, the Alligator function mixes stories that are put together in individual videos from the content to form a story. The AI examines the content of the sung information and provides the next suitable video for the specific content. At the end of the mix, you can save your story as text for your own paperback and try to read the stories that have been linked together by AI at home as an ebook file on your reader, get inspired and enjoy reading. In addition, a script can be created from the mix, which the AI can use to create a new video from Alligator and also create an individual text with the story of the paperback, which the artists then receive as an offer to interpret this and ultimately sing or act it. This creates new creative videos that can be distributed as aligate on the social network and admired.

In addition, the aligate videos can be expanded by the sighted users through questions and can be learned from when others provide the answers and integrate them into Wikipedia and link them with real information in order to ultimately obtain a lesson from them, in the best case as a training video.

## **No. 957 LikeARadio**

You have a, by clicking on the button + appearing-the digital magic hat, in this hat are, song lyrics,

Your favorite music videos, now play your favorite song as a music video, this time with activated subtitles, now swipe the words that appear from the digital magic hat that correspond to the line in the subtitle with your finger, matching the word in the magic hat to the words at the exact time and correctly targeting those in the subtitle, in addition, when the words in the subtitle dissolve, you have to use the second magic hat to place the suggested words from the magic hat created by the AI into the empty spaces, swipe the suggested AI words in, now a different text appears at the end of the

game and can, if it makes sense, be reinterpreted and sung by the artist, which gives the game a new touch, you get points for each word swiped away and for adding a new word to the blank space, collect

You earn points to move up the rankings, the first 3 of the monthly rankings in this game are allowed to

Artists perform the song in a duet and take turns singing the words they have set with meaning, which were previously suggested by the AI, the active viewers of Youtube give their rating and push them, possibly high up in the likeARadio charts, with a little luck they make it big and get a deal with a music producer and realize their dreams as a game musician, on a good

future seen through the likeARadio plugin from Youtube

## **No. 958 CapWme**

You click with soft, medium, hard touch on the + button on YouTube, now preview animations of music videos that will be released soon appear on a grid directory or a screen with a countdown system, to be seen on the first page on YouTube, you can refine the preview animation with your directorial skills, that is, you add images, texts, videos, contributions that you have collected from the Internet over time and accumulated according to your preferences from your CapWme a(Came party with me) database, which is linked to YouTube, into the preview animation using drag and drop, you thereby give the director of the music video to be released in the future input, i.e. content that he might like to match the new music video, into the preview animation using drag and drop, as a so-called groundbreaking interpretation, which could be fulfilled according to your wishes in order to create the new music video according to your adaptation, in turn other users who have been selected push their content to the preview animation, the app CapWme(Came party with me) links and separates suitable content using AI technology and throws out inappropriate content from your page, as seen, from the content of the preview animation and thus automatically filters out superfluous or identical content that has already been given as input by other users, from the preview animation root directory, so that no overlay can take place.

The data pushed by them can be viewed by the director of the upcoming new music video and, through start-up AI application, can help the director to use new ideas to realize his interpretation, according to the open opinions of users, which play an important role here. He sees the composition of the upcoming video through the active functions of the AI and can implement the user content that was pushed into the preview animation in real time at any time and free of charge while directing the upcoming music video live, or he decides for the complete content extension created by users through the AI and only adds his optimizations to realize the upcoming new music video and ultimately produce it in real form.

Came Party With me, serves as a goal for free directing plus directing professional work linking fans from the Youtube network and their personal data, which helps the directing professional with AI to be able to use new ways of producing and interpreting new music videos in the future with the added value of saving production costs and being able to address a wider audience, since the work was done in a network, and then distribute it better on the Internet, see social media

## ***No. 959 FeelMyHeartBeat***

No. 1 You use the button called and abbreviated FMHB - Feel My Heart Beat, to pull the goospump that you feel in your body when you hear a sound in YouTube music videos at a certain point or passage into the music video, while doing so a connection can be made between another user who is using the same principle in real time, he pulls the button to the same place where he gets a goospump from the sound, now a heart appears on your set music video at the point where you placed your button, a match occurs between a female and a male person in this dating plugin function from YouTube

No. 2 Now a chat can be started between the two people from YouTube, either positive or negative, starting in the future, to keep it positive, place the button again in other videos that trigger a goospump in you and wait to see if the person you are connected to places the same button in the same place in your now visible music videos, if this happens several times, you can assume that you are moving at the same music level and can fit in with the groove, you will definitely find this out in the chat or test yourself to see if your goospumps have the same effect on other music videos as in others where it worked, if you have experienced the same goospump in the same place repeatedly together with the placement of the button, this can be used to express to you that you exude the same emotions through the music you like and that in the future you will have a smooth feeling of getting to know each other better in private chat

No. 3 If the chat has not reached a point where both parties cannot exchange ideas, continue to collect hearts and try to position yourself higher in the rankings and show that you are available to other singles who have collected the same number of hearts as you, or at least almost the same number of hearts, in order to alternatively start a chat with a new single again and hope that this time you will be able to communicate and that a friendship will soon develop between you, with joy for the future in real life.

## ***No. 960 Purge***

No. 1 You have to touch the + button on Youtube, with soft, medium or hard touch, then say the word 'purge' through the microphone of your smartphone, you will then receive 3 alternative views of the classic Youtube displayed in a modified view

No. 2 The first view is a 3D globe in which you can move around and after multimedia content via swype in visual 3D view, you should acquire the YouTube content of the 3D globe

No. 3 The second view resembles a digital magazine, as known from your TV Movie Magazine, classic, from the kiosk in your area or surroundings, as you know it

No. 4 The digital character "Purge" can be activated. It is used for the visual representation of YouTube content. This means that it has its own 3D room where you can decorate your walls with panels, each in 6 different sizes and in 6 different directions, see square cube room. All you have to do is drag and drop your videos into "Purge" and bring it back to your digital YouTube room after searching for the content you have chosen. You touch the digital character "Purge" in your digital YouTube room when you have finished searching for videos and drag the videos one after the other into the panels that are located in the 6 directions. You now have a YouTube room in 3D format where you have attached 6 different videos to 6 different walls and panels in visual, 3D form but in a classic way. The trick of the panel is that one panel has several on top of each other. has layers where you can put videos, roughly speaking, the number per panel is limited to 30 videos, a grid view, in miniature format, shows your 30 videos with thumbnails per panel or you swipe the videos, like in a time scroller from bottom to top, to get to the other videos.

No. 5 Accordingly, with your character "Purge" you can collect around 180 videos and put them in your YouTube room on the digital direction board and thus view them better from there and assign a category to each board. You can also invite a friend to your digital 3D YouTube room, as mentioned, which is designed in classic 3D visual form, and touch his "Purge" character and upon his approval and transfer his videos to your boards. Meanwhile, your character can be invited to your friend's YouTube room and in return be touched by your friend to access the videos you have collected by touching the character "Purge" and putting the videos from his body into your digital boards.

## **No. 961 Miautschow**

You click on the + button on Youtube, a glass appears  
Called „Miautschow“, without volume and content, now marvel at your  
videos and drag and drop screens from the videos you like into the empty  
glass, fill the glass to a certain amount and shake it with soft, medium,  
hard touch, with your

Finger Swype, like a cocktail back and forth, the outgoing AI, which is in the glass  
full of screens, searches for suitable screens at suitable moments and creates  
a so-called  
Short story, from the pictures, to an animated video, you do the same with the  
text from the subtitles of your favorite videos, this text is now used for the  
individual animated video, to direct it in order to guarantee a specific sequence  
of the video, this means in the sense that you do not write the directing script  
yourself, but can support it with subtitles from your favorite videos, the AI,  
which compares it and assigns the appropriate screen, then links your subtitles  
to the collected screens according to the content and asks you, after the animated  
video has been created, a few questions about visual understanding in order  
to sort out incorrect links and follow your answers in order to optimize the  
direction of the video afterwards, once you have created your short video, this  
can be added as a bonus at the end with the content of other static YouTube  
videos in the network, to underline the entertainment of the classic video and  
support it with the animated story, so you get reels and stories on YouTube, a  
new segment of information and visualization of watched videos through

Support for these so-called MTS videos that you create yourself, a  
community of the YouTube network gives the permission to use these self-  
created videos created with the help of the AI function.  
MTS Videos, free if the content appears legal and intellectual and can provide  
an extension and added value to the classic videos as an addition

## **No. 962 Moonflake**

No. 1 You activate the MoonFlake button or the icon, then the entire music video text, i.e. the lyric, is displayed under the video, now you can use the magicStick alias Touch swift with your finger, as is known, to select and mark your selection for the text that is shown, it can be selected individually, which means that you mark a passage or individual words, the MagicStick (your finger in this case) leaves your question marks with 3 questions, 3 exclamation marks and 3 dots on the played karaoke text, at the marked places that you left with touch swift...

No. 2 Now send the text you have edited to the interpreter, in this case the music owner or artist, and ask him to answer the question marks with the 3 questions in the places you have marked, to respond to the 3 exclamation marks and to leave information about your own opinion on the 3 dots.

No. 3 In order to be able to contact the artist, you must first have won the complete text in the correct order as karaoke in a battle against another user of the YouTube network. First, collect enough winnings, i.e. MoonFlake points. Once you have collected the appropriate number of MoonFlake points, you can now exchange these for the question marks, exclamation marks and 3 dots you created with the magicStick to establish contact with your song interpreter.

No. 4 If you are lucky, your interpreter will answer your question marks with the 3 questions, the 3 exclamation marks and the 3 dots and will contact you to take note of the other text generated for you by him, to inform you about what and after whom and why you have given him these magicStick tasks.

## **No. 963 Quadak**

No. 1 You click on a music video on YouTube, after clicking the square of the layout of the music video or front layout image turns into a 3D cube that wants to play with you

No. 2 The cube, for information, is 3D dimensionally rotatable, i.e. in 6 different directions of the square, each surface of the cube gives a signal, in this example a tone, you have to touch the tone with soft, medium, hard, touch by pressing on the signal surface, where the transparent cube gives the color signal, with soft, medium or hard touch and thus respond to the signal tone

No. 3 You will receive points per achieved tone position if you respond to the tone position with soft, medium, hard touch in the correct order, the song continues to play in the background, as long as the Quadaq game with the song lasts

No. 4 Collect as many Quadaq points as possible in the time remaining for the song to be played. After the song has finished, your points will be uploaded to a ranking list and registered with a thumbnail of your profile

No. 5 You can challenge a user from Youtube who is behind or in front of you to a battle and compete against him in the split screen. The one who collects more Quadaq points in the running time of the song wins the round and moves up one place in the points ranking.

No. 6 Try to get into the top 3 of the rankings of the month to unlock the Quadaq Connect Fan function, this allows you to play the game with the artist of the video, this time it's about changing the beat of the song playing in real time with soft, medium, hard touch to match the signal color of the area of the square, which is constantly changing, in order to give the song a new touch, if you win against the artist of the song and change the song, this song can be played on your channel for a month, the income from advertising for the song will be credited to you and you will receive a payment the more users click on this video and watch the advertising, let's start Quadaq

## **No. 964 Poziom**

No. 1 You select your favorite music video and play it, the lyrics that you previously activated will appear on the video

No. 2 Now click on the icon called,, Poziom,, up to 6 levels will open under the video, which will play and filter out the instrumental part of the video, now drag a word from the video, which is sung, into one of the levels

No. 3 The word is divided into vector points, you can now rotate the colored vector points of the word, pull them in individual directions, activate or deactivate them, each of the vector points shifts the type of tone individually in the instrumental level where the word is sung and pulled in, but matching the original instrumental beat played, in this case, high tone, middle tone, soft tone, or integrates individual tones that are stored in the vector points by the AI to match the original for mixing and redefining your personal needs, pay attention to your good hearing and mix your classics of your favorite music videos with this new way of using No. 4 You can pull in up to 6 words in the 6 available levels that are filtered from the song and thus adjust and change the instrumental well-being in real time and thus give the song a new touch, you can also re-create the vowels of the sung word with the AI colored vector points and can be customized

No. 5 If you have now remixed your favorite music video, you can forward it to other users and have it processed there or save it in your favorites, poizom" list and access it again in the future, even upload it as a reel in short length and make it available for distribution

## **No. 965 Mr. GoodBar**

No. 1 You click on the + button on YouTube, with soft, medium, hard touch, a digital microphone appears above the + button, above the popped up digital microphone, in a semicircle the last 6 most viewed videos from your media library, you drag the digital microphone into the video and it will then be displayed on the special page Boomin System

No. 2 The special thing about the site is that you can interact with the video you have selected in real time with the larger microphone that appears on the Boomin system page on YouTube, which means that you can primarily ask a question from your conscience or use the individual questions automatically presented by the AI about a text passage or word combination played in the video that you do not understand in your language. Meanwhile, the microphone on the Boomin system page of the video remembers the questions you have asked and when the video has finished playing, the Boomin system special page connects users from the YouTube network who have just watched the video or watched it several times and sends the users their questions about the required text passages and word combinations that are not visible to them in the artist's original language. No. 3 You will then receive the answers by voice with a pop-up sound through your digital microphone and translated into your language by the users of the YouTube network who were randomly selected to give you the answer in real time. to transmit

your digital microphone, the users who send these answers to you are big fans of the artist who provided them with the video, so you can be sure that the answers are prepared for you as expected, as an alibi, if you have not understood these answers in detail, you can tap the dollar symbol on the microphone and make a donation to the artist of the video, with the hope that he will accept your individual donation and in turn possibly explain to you live or afterwards what he meant by the text passages or word combinations in his understanding, either you hear him live via microphone or in the addition of a specific voice answer, after making an individual donation to his personal account

## **No. 966 JoFlow**

No. 1 In this YouTube plugin you can drag and drop your YouTube content that you like into a digital plant called "Jo". You activate this plant as your storage. The plant appears whenever you touch a video with soft, medium or hard touch. You can also double tap on the plant and display the search function. A color wheel appears, which you can use to select your mood color and after selecting the color, YouTube content that contains this color is displayed.

No. 2 In addition, the plant can create a remix using AI, which means that if you click on the plant, "Jo", you can see the last 3 videos from the same category, in this case as a wheel, around the plant and then you press the plant again with your finger with a hard touch, the plant's AI now creates a remix, which means that the content of the relevant music videos is linked to each other and the content of the music video is linked to each other, which means that one video switches to the next if the content makes sense in the knowledge.

No. 3 With medium touch you can take apart the music video from the wheel selection that appears, that means that with the medium touch function you can save the sung content in your note directory of the digital plant, "Jo", depending on the selection of the length, in this case, 3 lengths provided as an option, intro, mitro, outro, save several intros, mitros, outros in your personal directory, so you can have the AI link the different sections of individual music videos to each other as content, to a meaningful new text

No. 4 With the soft touch function, you can use the AI to send popular images from the music videos to the intro, mitro, outros that have just been mentioned, matching the content of the intros, mitro, outros, as well as link branches of music videos in short, medium, long form and finally have them put together by the digital plant "Jo" into a video that you can share as a pilot project with an artist of your choice that you like in order to inspire them to create new texts and videos in the future.

No. 5 Exchange your collected pilot projects with your friends on YouTube and link your storage with other digital plants to optimize your media library at a level, to refresh it, to keep it actively growing

No. 6 Use the karaoke function of the digital plant "Jo" to record your AI-created lyrics in a new guise to match a video of your favorite artists and distribute them in the YouTube network to people who can form their own opinion about it and receive a summary of it. Your lyrics sung to match the video, which you have created through searching and the AI's help, now appear in your video or in the video you found as an example and can be recorded as a live story and presented as a gift to the artist you like. If the artist likes your new self-created text passage interpretation for his video, you will receive digital hearts from him for your digital plant called "Jo". This means that the plant now grows, thus expanding its memory and its intelligence, to be provided with further options for content music creation in the future, namely Director interfaces, in order to be able to create the right video for your sung interpretation with the help of the AI.

No. 7 If you have managed to get enough hearts from your artists and created a video with your interpretation of the meaningful, collected text passages you have put together, you can apply for the YouTube concert mode with it, see the super talent from the television, if you have managed to generate yourself in the YouTube concert mode and your video gets an attachment from the audience, you will now have the opportunity, if you have made it to the shortlist, to perform this song in a duet with your hit plus your favorite artist, alternating in real time, live on YouTube in the future in the YouTube concert show.

## **No. 967 Sidantre**

No. 1 On this social media platform of the future, you can upload your multimedia articles, videos, images, music, videos, texts, contributions to a digital magazine, the digital magazine is filled with your individual uploads from registered users who have registered through faces and passport control, and can be operated as follows

No. 2 You control the digital magazine like a 3D globe, by rotating the globe in which the digital magazine surrounds the 3D globe, there are areas, each area has its own meaning for the multimedia articles, as mentioned above

No. 3 For example, you can rotate the globe and click on an individual multimedia area, which will then open the content of individual videos, images, music, texts, articles, which are presented in a digital magazine format and sorted by appropriate categories.

No. 4 You can now view all multimedia content from users you have met as friends or personalities in the network in the digital magazine, or use the random algorithm to fill the digital magazine with content from the user's uploads and have this displayed.

No. 5 The digital magazine is displayed by clicking on an individual area on the globe that matches the multimedia content you might like. A timeline will now appear that can be scrolled up from the bottom, as is known from existing social media platforms. The timeline can also be filled with new uploads of multimedia content to expand it.

No. 6 You can set your own individual timelines in your digital magazine and connect and exchange them with other users of the network in order to obtain a new diversity in the future

No. 7 You can visually comment, review and like the individual content of the timelines, as well as pass it on to other users and distribute it to other timelines in the network

No. 8 Through the search you can display specific information from the timelines and have them displayed visually and also recommend them to friends in the network

No. 9 Finally, your network globe can be controlled with the remote control on the television and offers, with the appropriately developed functions of the remote control, controlling the network with the remote control, a new innovative way of communicating and providing a new handling for the user.

No. 10 In addition, they can also implement the existing data from other social media platforms into their timelines in their digital magazine and assign them separately, specifically and in an orderly manner to their magazine category using AI

No. 11 On the television network on the PC or smartphone, you can now view friends' globes with their integrated digital magazine and get information about multimedia information via the timelines

No. 12 You can fill and update the globe with new content for the digital magazine and its timelines by sharing it with your friend or the personality from whom you received it, and after a certain period of time you can give the globe back to your friend or optimize and refine it in real time according to your needs. No. 13 Use the other newly developed plugins from the SidAntre Gallery to improve the system for distributing and communicating information

## **No. 968 Whatdojo**

No. 1 You click on the "what are you doing right now" field on Facebook, now a circle appears around the field with the portals, in this case Wikipedia, Google, Spotify, YouTube, streaming sites such as Netflix, Amazon Prime or Disney+, social media sites such as X, Instagram, Reddit and many other portals will follow and be integrated in the future. No. 2 You now click on one of these portals with a soft touch, in this example on YouTube, and you will see a short

history of your last videos viewed under the "what are you doing right now" field in a timeline. If you click on Google, for example, with a medium touch, a medium history of your last search queries will be displayed. If you click on Wikipedia with a hard touch, the timeline will show a long history of the articles you have searched for from Wikipedia. If you click on Spotify with a soft touch, a short history of your playlist will be displayed in the timeline. If you click on Disney+ with a medium touch, a medium history of your last films viewed will be displayed in the timeline. displayed under the field "what are you doing right now", click with hard touch on Instagram, a long history of liked reels will be displayed in the timeline, click on X with medium touch, a medium history of your timeline of X, for example, will be displayed, you can forward these individual timelines of the various platforms to your friends or post the information directly on your Facebook start profile No. 3 You can also enter a message in this field immediately and click on the field and send the message to them in the carousel of faces of your friends that appears and attach and send them a multimedia attachment, like on WhatsApp

## ***No. 969 GlitterRing***

You slide onto a ring or circle with only inner and outer contours with one person and one foot and try to jump from the circle or ring to the next with your foot and connect a new circle or ring. There are different sizes of circles and their inner and outer contours. Keep control and spin a 360 degree turn onto the circle with your person and their foot. Stay and activate the circle or ring and hop to the next individual ring in your vicinity or surroundings. You must note that the rings or circles are different sizes and make their way down uncontrollably on the route. The ultimate goal is to make a 360 turn with your person and foot per ring and to balance on the other rings until you reach the valley in order to reach the finish. If you fall down, you must continue surfing and hopping from the next activated checkpoint and perform your turns until you have covered a distance to the finish. with these moves mastered.

## **No. 970 YoubetterWatchme**

No. 1 On this streaming platform, only the following streams are offered for viewing in individual and differently ordered categories: reels, music videos, documentaries, sports summaries and do-it-yourself videos. No. 2 Reels are so-called short videos that you know from social networks, music videos that you

know from YouTube, as well as do-it-yourself videos that are used, for example, in various craft scenarios, to imagine them and then to learn something from these videos. In the sports summaries, various sports are offered that are combined with a suitable reel and documentaries are combined with additional information from Wikipedia. No. 3 The dashboard can forward the content, which is shown as circles or tiles, to other users of this platform in real time using the drag and drop process or distribution button, which means that you can not only exchange messages with your friends with whom you are linked through the dashboard, but also your favorite content from the platform on the faces, i.e. your friends can drag and drop your content or use the distribution button to share your content. that you would like to exchange

No. 4 In addition, you can assign and display individual posts from Facebook or X that match your content, which you have displayed on the dashboard in tiles or circles. In addition, Wikipedia entries with important information about your content can be assigned via AI and a live stream can be connected in order to talk about your content on your dashboard in order to get new information about the content.

No. 5 In addition, the dashboard offers a marketplace where you can look at things and, after viewing and accepting the offer, buy products and offer them for sale. Your dashboard can be transferred to the remote control and switched or exchanged with other friends in real time.

## **No. 971 Viratia**

No. 1 You must try to build a digital wonderland with Facebook, which means that you will be provided with very creative building resources with your creative collected contributions on Facebook and use these to build your wonderland.

No. 2 Once you have built your wonderland with a digital tool kit and your collected contributions, videos, images, texts, music, you can invite other players who have built one themselves and give them a guided tour. No. 3 Once you have built new infrastructures and created new buildings in your wonderland with your creative building elements, you can now invite Internet users and companies to your wonderland through a visual guided tour, either via VR glasses or in a newly designed 3D view in the ego perspective, with the aim of experiencing Facebook differently. No. 5 The virtual tour should encourage Internet users to get to know Facebook in a new way in the virtual world.

nen

No. 5 For each post you see and like in your Wonderland, if products are purchased, you will receive an individual digital coin amount transferred to your account and you can use the coins to purchase additional components for the creative Wonderland or receive real products from the Marketplace in exchange for the coins in order to be able to make it even better for the Facebook community in the future.

## **No. 972 *Salatka***

No. 1 To share your liked posts on Facebook with your friends in the future, where videos, pictures, texts or music are hidden, all you have to do is the following

No. 2 Your liked posts are visible on a special page on Facebook, under your account and can be viewed and viewed at any time in specially divided categories and used for further processing. No. 3 You open this account page and drag your liked posts, for example from the categories videos, pictures, texts, music, into the friends faces carousel, which is shown to you, onto the appropriate vector point facial features of the respective friend, for example I drag a video from my collected category directory, which I have collected, onto the forehead of my friend "Michau"

No. 4 Now, your friend, "Michau" in his category Videos, has a new video, which he can accept or not, on

No. 5 This is what you use, now, with your contributions (videos, pictures, texts, music) that you would like to share with your friends and hope for acceptance of your shared multimedia information

No. 6 Again, your friend "Michau" can use the same principle as described here to send you his individual, collected multimedia content personally

No. 7 Finally, strangers can also be selected from the face carousel on Facebook, from their vicinity or surroundings, and with their consent, with the acceptance of the taken face, multimedia information can be exchanged with each other

## **No. 973 Gicho**

No. 1 With the improved version of the Story + button on Facebook in the future, you can use the following options via soft, medium, hard touch

No. 2 With the pressure strength "soft", the button + creates a soft or short description of your uploaded media and accompanies it with Hollywood-style staging, which means that you select the category in which the staging should take place from the circle touch area of the Story + button, for example - comedy, action, drama, sci-fi, etc.

No. 3 The button now creates, in this example, a comedy-like production of your uploaded content and asks you for support, which with the help of AI commands makes it easier for you to master the support. No. 4 With the pressure strength "medium", the story + button summarizes a medium description and with the pressure strength "hard", a long description of your production of your uploaded media in Hollywood-mature production, depending on the selection of your individual category.

No. 5 The process facilitates the compilation of your story post at this point with the help of AI and your AI commands and gives you a unique scenario, your short, medium, long presentation, your own media on Facebook that you had provided

No. 6 You can then share your story posts with your friends and network and wait for feedback. If the Facebook network likes your posts so much, you will receive digital coins as a gift, which you can use for products in the in-house marketplace and exchange them for products offered by users from the network.

## **No. 974 WubbaDubba**

No. 1 With the WubaDuba button, you can merge reels, videos, images, posts, texts that have similarities on Facebook with one click. This means that you click on an individual reel, video, image, post that appears and then select from today or with a time scroller, specific days. All relevant reels, videos, images, posts, text that have similarities with yours will be merged on a new page in a grid directory and classified according to the appropriate category, which you can view. No. 2 With one touch, you can position the ranking of the merged reels, videos, images, posts, texts with touch up and down in the ranking in your grid placement directory, according to your individual feeling. In addition, the various reels, videos, images, posts, texts can be combined into a swipe story. This means that the WubaDuba button + filters out your reels, videos, images, posts, texts from their individual categories and the content topic. adapts, you can have 3 to 6 reels, videos, pictures, posts, texts put together into a story and have them distributed to your friends list or sent to Facebook users in a carousel and wait for feedback from Facebook or receive a positive Facebook review with which you receive points, with these points you can exchange these points for discount vouchers on your own marketplace on Facebook in order to get the price of products at a lower price

## **No. 975 Preamy**

No. 1 You can access a database of news and information. This database contains individual, real-time informative excerpts from Wikipedia or Lexicon and news directories. You can now click on a post on Facebook that you like and then, using the circle touch selection process, the AI will attach information matching the image, text, video, post from the above informative directories to the selected and clicked post and will be provided with a paperclip icon and made transparent. This means that when you click on the paperclip afterwards, important and essential information will be displayed as text, video, image, which was taken from the informative information databases and, using the AI, the appropriate selection in the circle icon touch selection process with several options by clicking, gives you the opportunity to attach the multimedia information addition.

No. 2 You can also click on the question mark icon, the paper clip, and randomly contact a person from the Facebook network and forward them questions asked by the AI about the clicked post, and wait to see what the real person's opinion might be on the questions created by the AI about the post, you will be informed when a random person from the Facebook network contacts you about it

## **No. 976 InSky**

No. 1 With this integrated function on Facebook, you can establish contact with the friend or person on Facebook, after requesting an individual post, via live stream, so that the InSky system connects with the friend or person and you can activate it by dragging and dropping, adding the InSky button to the respective post of the friend or Facebook person, now ask questions about the passages of the respective posts in relation to posted videos, images, texts, etc., which the friend or person can answer for the selected post in relation to the video, post, text, music, image.

No. 2 You have now created a live stream with the friend or person or received the answers to the questions you asked, to the passages of the selected post from the friend or Facebook person that you did not understand. If you are lucky, you are connected to the live stream and are chatting live with the friend or Facebook person and can look forward to a short podcast live with your favorite. This podcast is recorded and ends up in the InSky database on your Facebook account. No. 3 Click your InSky button or from your friend or the Facebook person in their account and receive the podcast for the respective multimedia content of the category to which the InSky button was added. Select a category and click on the InSky button and receive new information using the digital podcast for the individual contributions or posts.

## **No. 976 InSky**

No. 1 With this integrated function on Facebook, you can establish contact with the friend or person on Facebook, after requesting an individual post, via live stream, so that the InSky system connects with the friend or person and you can activate it by dragging and dropping, adding the InSky button to the respective post of the friend or Facebook person, now ask questions about the passages of the respective posts in relation to posted videos, images, texts, etc., which the friend or person can answer for the selected post in relation to the video, post, text, music, image.

No. 2 You have now created a live stream with the friend or person or received the answers to the questions you asked, to the passages of the selected post from the friend or Facebook person that you did not understand. If you are lucky, you are connected to the live stream and are chatting live with the friend or Facebook person and can look forward to a short podcast live with your favorite. This podcast is recorded and ends up in the InSky database on your Facebook account. No. 3 Click your InSky button or from your friend or the Facebook person in their account and receive the podcast for the respective multimedia content of the category to which the InSky button was added. Select a category and click on the InSky button and receive new information using the digital podcast for the individual contributions or posts.

## **No. 977 LDK**

No. 1 You install an AI button called LDK (Le Dimension Kid) on Facebook, the goal of the future AI is to create a story for you from the media you drag into the button with soft, medium, hard touch, in different forms, be it video to video, image to image, music to music, post to post, etc., and to use variable links to tell meaningful content to these media with the aim of inspiring you, which should create a connection with the same content based on your mixed and liked media content

No. 2 If you have dragged individual content that you like from Facebook into the AI button LDK (Le Dimension Kid), the AI button will construct a multimedia short story for your header that users can see immediately if you want to share it

No. 3 In the future, you can exchange your short multimedia story from your header with your friends and try to direct and optimize it into a snake-like multimedia film based on the content of your friends. This exchange makes sense, a multimedia chain reaction and can quickly inform them about the most important things of your friends' multimedia lives.

No. 4 To find your way in the multimedia queue or in the created chain reaction of multimedia content, simply use a digital multimedia compass plus a multimedia scroller with categories as a search supplement

## **No. 978 Groot**

No. 1 in the distant future, we wish for Groot, it is a digital plant (icon) that will hopefully be integrated below or next to the videos, posts and photos on Facebook

No. 2 The task of Groot is to store all possible media content that is shown to you via drag and drop in soft, medium, hard touch procedures into the digital plant Groot

No. 3 If you have saved your digital data from Facebook in groot, you can find it listed in your groot media timeline and sorted into categories. You can also exchange groot with your friends in order to surf on their media timeline in the future and find out what is currently going on there.

## **No. 979 The Voice**

No. 1 You integrate the following Voice Button, briefly described here, into Facebook

No. 2 The Voice Button is used for entertainment functions, to teach videos, posts and pictures using emoji entertainer AI voices, which means that every voice submission in the future can express a special kind of culture with the entertainment emoji AI voices of internationally famous people or fictional and non-fictional characters from different countries and areas of entertainment.

No. 3 For example, I select the voice button and use it to make my comment, while in this example I select the voice from the soft, medium, hard touch circle around the voice button, Darth Vader and put my voice with the voice comment, with a new feeling, matching my mood to the video, post, or picture

## ***No. 980 TouchTukan***

No. 1 You control a toucan bird that has the mobility to be moved in all directions, down, up, right, left, vertically, diagonally

No. 2 He sits on

branches of different tree species that are mobile, turn and position in different directions and tries to take the sweets from snakes called rubies that hang on the branches and put them in his individually controlled beak

No. 3 By soft, medium, hard touch, try to chase and pick up the snakes, which are controlled in real time by several players from the Internet, with the beak of the toucan, which can vary the length of the beak, the sweets hanging from the branches and varying their height individually, on the different types of trees, depending on the height of the snake's descent

No. 4 Try to take all the sweets from the well-known, real manufacturers of the candy industry away from the snakes within the required time and give your toucan special abilities, namely three in number, better jumping, aiming, catching, ability, in order to snatch all the sweets ultimately carried by the snakes with soft, medium, hard lengths of movement to the individual snake seen on the branches, thereby gaining points and using them to get to the next fantasy level.

No. 5 It is important to know that in this multiplayer online game, one against all, all go one, you can experience the special thing that you have to control with soft, medium, hard touch, the function of the characters to be controlled in real time, in order to reach the goal, namely for the toucan to hunt the sweets by picking up the beak and for the snakes, controlled by the Internet users, who protect the sweets, the one who can grab all the sweets from the snakes with the toucan in the given time, gets free access to the next level, as mentioned above, if they do not manage to grab all the sweets with the toucan, they have to, for the online players who have controlled the snakes with soft, medium, hard length movements from the branches of the individual tree types, cover a set distance in the real world, which is shown after the defeat in the catch touch game, in a certain time, in their vicinity or surroundings, in order to have a chance of receive the opportunity to start the game again, with the result of the physical, real movement form, to charge the toucan with new energy to start the game again or they buy the lost sweets in the real shop, scan them and send the quitting about them to the snake players in order to order a new chance to start the game

## ***No. 981 DelphJump***

No. 1 You control a dolphin with octopus arms that are used as flippers, your goal is to reach a certain height and speed with the dolphin so that it can jump out of the aquarium to get to the next level. No. 2 The pressure speed of the flipper arms is variable to the pressure of the buttons, so called here as soft, medium, hard touch

No. 3 Watch out for the barriers and obstacles, as well as the dangerous fish species that try to prevent you on the way up, while flying upwards and trying to steer the dolphin upwards to the goal, you can collect certain power ups while flying, these are for example, speed, toughness, life energy, fireballs, ice balls, wind balls, water balls, and many more, these can be used to avoid the obstacles or to torpedo and destroy the opposing fish

No. 4 For every fish or obstacle destroyed, you receive additional points that are credited to your account. The game is timed, you must transport the dolphin out of the aquarium and switch it to the next aquarium within the required time. No. 5 You must also collect sea stars in the level with the dolphin in order to get points, which you then use to unlock new aquariums. The aim is to ultimately walk through all the aquariums and collect all the sea stars needed in the level in order to unlock your dolphin friend for the multiplayer mode at the end and experience new adventures with her in the world of aquariums.

No. 6 Collect colored vector points in the real world as signpost points after you have been given a route given by the app within a certain time in order to unlock new dolphin species, to access the bonus aquarium levels with the specially unlocked dolphins when you have collected enough vector points in your telebox within a certain time, to contact the other individually available dolphins in order to master and conquer them in the switch for the special aquariums that appear as a bonus.

## **No. 982 KWIAT**

No. 1 On this new social media platform, you register using an eye scan

No. 2 The user interface uses flower-like icons, exactly six in number

No. 3 In order to launch the platform, it is necessary to activate the plugin,, Florin" on every system with an operating system that is internet-capable

No. 4. You activate the "Florin" plugin, scan your individual system with your eyes, a circular selection of 6 different flower icons appears on your system at any time after the mouse or finger tap, using soft, medium, touch, now you drag the data using mega drag and drop into the various flower icons that have a category, in real time this data is uploaded to the KWIAT platform in the various categories of flower icons, be it video, image, music, text, graphics, messages in your personal profile

No. 5 If everyone uses this system plugin,,Florin" on their system as a mega drag and drop to collect data for the KWIAT platform, a new social media platform will be created in a short time, with personal and individual data that can be exchanged with other users of the platform using icons from the user interface, and may be supported with additional information. No. 6 Use the mega drag and drop function to feed the plugin,,Florin", which consists of different flower icons, for the user

interface of the KWIAT platform with data. Each flower icon has a multimedia category and when you click on the flower icons, an organized magazine appears displaying your collected data from the Internet, which can also be streamed on large digital display formats in the future.

No. 7 To start the "Florin" plugin, you must cover a certain distance in kilometers a day and log in to the notch + app using an eye scan on your smartphone. Each kilometer you run gives you a certain number of bytes, depending on how fast you ran, which you can download from the Internet into the KWIAT platform using "Florin" and import. The less you run, the less content you can load from the Internet into your own profile on the KWIAT platform in real time. The more you run, the more bytes of volume you can import into KWIAT, in real time or afterwards.

No. 8 Collect additional symbols such as hearts and other special ones on your smartphone near your home or surroundings or on a personal route, send them to individual faces of the KWIAT network to request flower icons, then receive the data collected by the person personally on the Internet, once you have collected the required number of digital hearts and met the required number of pieces, you will have the opportunity to receive the various hearts and flower icons requested depending on the level of requirement, so you can see what your friend or individual person, collected on the Internet and his multimedia process can offer you for more optionality at your disposal.

No. 9 In order to finance the portal, a small fee is charged to your data magazine at the end of the month. If you would like to keep your data magazine, you pay an individual sum, which is offset against the amount of data, to the authors of this collected data. This works if you pay the amount via PayPal at the end of the month into a common pot, where all costs are collected and individually paid off. This pot is monitored by the police and is used to pay back the authors of the data they collected and made available on the Internet. In the future, close and closely linked regional advertising for your companies in the district or federal state will also be placed on the platform in order to finance jobs in the future of the platform. The fee, which creates added value from the advertising revenue, is sent to charitable causes and given away.

No. 10 In order to protect the collected data from misuse and thus maintain a clean portal or platform, so-called colored vector dots are on the lookout for unsuitable multimedia material. They are programmed for this purpose and with the help of their AI, they can read multimedia data and, if the content is not suitable for children or adults, have the uploaded content blocked or not allowed to be uploaded at all.

No. 11 For protection, the platform KWIAT compares with its own algorithm other platforms, such as Facebook, Instagram and X etc., points out illegal content, by comment and threat, of a multimedia illegal data scenario uploaded to their own profile page

No. 12 A cremium of moderators can put the adult data into a digital hole in real time and learn from it to program the vector dots in the future not to put this data into the network

No. 13 Anyone can be a moderator in this network, they just have to click on the coin police button and send a personal urgent message to the platform moderators who will then check this FSK 18 or illegal data via real-time notification and block the content from being uploaded.

## **No. 983 Ikarus**

You put a modular battery under the conventional sockets for safety in case you no longer receive power from outside your living space. These batteries can be charged with your running devices or externally. For example, if your power goes out, you switch the battery using the green button on your sockets and activate the alternative power source to get all devices back up and running. You can also change the batteries and keep them running at all times.

The algorithmic AI developed from babaDoc is used to develop a powerful and safe, optimal new battery with a high degree of utilization with low losses and high added value for ongbak in laboratory experiments. In this game you have to run through the fields and the shema of chemical symbols, these appear randomly on the playing field, control the line connections and activate them when you have run through them and throw the ball into the basket, for each basket hit, this chemical symbol is activated on the playing field, now try to activate other symbols or the opponent tries to activate a different symbol by running through the shema of the symbol and sinking the ball into the basket. Chance should decide which connections are activated or not, it can be that the player only partially activates a shema and the other player only partially activates a shema and only then is the ball thrown and hit. If it comes down to chance, they can use the various random shema activation compounds and make them boil with real animal noises, and then study whether other compounds in the chemical phase under the microscope produce a new chemical symbol by chance. This must be technically examined and successfully researched in the future. If the research is successful, these randomly generated compounds of the new or linked chemical symbol can be used in the pharmaceutical industry for the research of new plant seeds in order to obtain an extraction from the plant that can be used for medical purposes on sick people and have a positive effect on an individual disease course in the future.

## ***No. 984 Scrut***

No.1 You use your social messengers that you know, to simplify them and to get an overview of the articles or, in your opinion, a better choice of overview, you must install the Scrut plugin as a new icon in the messenger to get a shortcut of your multimedia content

No. 2 The Scrut is a 3D dimensional cube (alternatively, a collection of 3D planets of the solar system, which are used to define a category for each planet and to save your own content of the timeline of the individual social network there, separately for each planet and its category. Select a planet and define a category and do the same with the other 7 planets. If you have dragged and dropped the content you like from the timeline into one of the planets, for example into the moon, the content is now in this planet and can be displayed in the visual form of a magazine by selecting it from the solar system. If you select the moon, this means that you now select the planet and it is filled with different content that matches the category. Click on it and a magazine will open that can be controlled by swiping from left, right, bottom, top. The magazine shows you the content that you have dragged and dropped from the timeline of the social network. You can filter out the individual contents by swiping them out of the magazine timeline, so that the specific selected area of the magazine that does not suit you is removed and automatically saved in the trash. You can also save the page content of the magazine in a plant, which saves the various pages of the magazine including the content. You can now combine this plant with another plant,

of a follower and then pick up new content by clicking on the plant and dragging and dropping the content into your magazine, with icons that indicate the different media, you have a visual representation of the files that you then fill from the plant into your blank or existing magazine, of the respective planet and its category, exchange your plant with other users from the social network and view its content or make your plant available to your friends online for free use ), which simplifies showing you one category per side of the square, in which the appropriate content and content that is visible for the category is located

No. 3 To see the content, click on the Scrut icon, which resembles a cube. It appears and you no longer scroll for the content from the messenger timeline, but instead get new functions and views of the content. This means, for example, that on the top side of the cube the category "Fun" shows your funny content from the messenger. If you click on the top side, the structured content of the funny content pops up in a timeline as usual, this time sorted and color-coded, according to priority and access and distribution, as well as views and comments and reviews, as well as your own opinion on the respective topic and content shared by Internet users. The timeline can, and this is the highlight, as you know it, be displayed in a grid and the view of new squares with filled content, which is divided into categories by AI, is displayed on your personal 3D cube.

No. 4 You use the grid to sort the content you like in the timeline by dragging and dropping it. The content of the content that can be seen in the "Fun" category divided into grid view can be pushed into a trash can by dragging and dropping it or you can move a digital plant and feed it with content by dragging and dropping it. The things that end up in the trash are saved for a certain time, the things in the plant are saved permanently. The plant can be fed with the content of the various grid squares and their content.

No. 5 For example, if you have created a new category on the 3D cube or one that was suggested to you, filled it with content for the grid squares or activated the automated content push so that targeted information, matching the category, finds its place there in the grid timeline directory, you can now set up further categories to fill your 3D cube with automatic content that you receive from the messengers, or you can do it yourself by selecting the Scrut icon and then the cube with the appropriate category page appears and you can put your personal messenger content in there and have it displayed in the grid square timeline directory.

No. 6 Once you have filled your cube with content, you can now display it as an add-on, like a digital magazine, as you know from TV magazines, plus with the option of having plants that were mentioned above, matching the magazine from other users of this plugin, placed in the right category and displayed, in order to pull things out of the digital plant, which is fed with other content from users from the messenger spectrum, and to incorporate them into your digital magazine with the consent of the user.

No. 7 You can also lend your plant, which has been digitally fed with content, to other users with the consent of the exchange, and have the collected foreign content displayed in your magazine and, after viewing, integrate it into your grid timeline square cube page

No. 8 You can also change your personal content creation history, i.e. your 3D cube, in real time at any time and exchange it with other users from the Internet carousel in order to access new information, such as text, images, videos, news

No. 9 Ultimately, Scrut is intended to simplify messenger user-friendliness and provide more targeted information exchange between the media in the messenger, in addition, the visual view serves as optimized orientation and additional support for the magazine, with the digital plant, to enable a new future of information procurement in today's messenger jungle

## **No. 985 CarMixGi**

No. 1 In this game, the app measures the kilometers you have driven and transfers them digitally to the CarMixGi game, which means that you drive one route a week with your real car.

In the month and the kilometers driven in the game CarMuxGi, digitally transferred.

No. 2 Now that you have recorded your digital kilometers, the game can begin. You start with the digitization of your car. To do this, simply scan your car with the app and the game can begin.

No. 3 You start an individual track and try to complete the fastest lap against the clock. You collect individual power icons on the track to improve your digitalized car and make it faster. You can also collect kilometer icons to increase the length of the track in the game. You have to drive your collected kilometers without making any mistakes and recharge from that point until the digital car stops.

No. 4 You can also compete in Battle Mode against other players who offer the same approximate number of kilometers to drive in the digital Battle Radar and try to achieve a faster time and a longer route by collecting the additional kilometer icons.

No. 5 The person who can drive a faster or longer journey with their digitalized car wins the game and collects points for the future. Once you have collected enough points, you compete in a kart duel on the kart track in live mode or in real time against other participants in the game on the kart track. The first 3 places on the kart track at the end of the month or at the weekend win an individual fuel voucher for their real car.

## **No. 986 Aris**

No. 1 You have a real cat that is trained to run its territory outside in the open air every day. We now give your cat a digital collar that measures the kilometers. At the end of each week, take the collar and scan the real kilometers run by your cat into the Aris app using the QR code. Implement these real kilometers run by your cat digitally by scanning the collar into the digital game Aris.

No. 2 Now try to master your digital cat in the game Aris with your runner up game Aris with the kilometers that you have loaded onto it, that means your digital cat called Aris has a certain number of kilometers that you can control digitally, barriers and obstacles in this digital runner up game prevent you from progressing along the route. If you have successfully completed your route by loading up the kilometers, you will move on to the new route level, if you do not manage to complete the route or your kilometers are running out, then you have to scan your cat again at the end of the week to get new route kilometers to continue the game.

No. 3 You can use the radar symbol in the game to search for other cats in your area in the digital game and challenge them in time mode if your kilometers are enough for the distance that your cat has covered outside for you and challenge these other cats in the area around the radar to a match for a sum of money in the digital runner time up game. Each cat player who beats their time in battle mode gets a certain individual amount of money that was negotiated before the match, credited to their digital cat account in the form of digital coins that can be converted into money if they win.

## ***No. 987 Digga***

No. 1 This mixed augmented reality game called "Digga" works as follows: In addition to your normal work, you have to try to find tools or building materials or raw materials on your construction site using your smartphone, using the radar shown to you in the Digga app, and make them visible using a camera scan and integrate this object into your library of the Digga game.

No. 2 If you have chosen, with your team or alone, to record some digital components on your construction site, then you can start with the digital construction of your village, in the future city, with the components, depending on the collection of components from your construction library.

No. 3 In the game digga, these collected digital components are needed to build houses and other buildings. If you have not collected any components, the in-game purchase option is unlocked after a while as a prerequisite for continuing the game without components. This means that you have to pay for the necessary construction components or you can search for the hidden digital components on your real construction site to build your house in the future village or city. In this 2.85D graphic construction simulation, the aim is to build the village faster and more safely than your opponents and, in the end game of the month or other time, to attack the villages digitally and ultimately conquer them.

## **No. 988 LeALFoHMat**

No. 1 You go to your supermarket or grocery store, the app of your store activates an offer radar for reduced goods, follow the radar if there is a need for the product

No. 2 Buy the product when you have found it through the offer radar and receive "LAF" points, which you collect up to a certain amount in an individual amount. No. 3 If your grocery store is closed, you can still make purchases by opening the LeALFohhMat at the front of the grocery store of your choice with your collected points for purchase, this means you hand over your points via NFC using your smartphone and receive predetermined and essential goods through the machine at the front of your individual grocery store in exchange for your collected points of the aforementioned principle.

## **No. 989 Pautsch**

No. 1 You see the time bar of the current channels in your TV streaming app while you switch channels, you tap with the remote control, measured according to your well-being, on the time bar of the channels maximum 6 to 8 channels can be activated with the remote control

No. 2 Now Pautsch's AI puts together the missing content of the various activated channels and its time loading bars, which show the length of the content of the film or serial or report that you clicked on, to create a content that fits the whole, i.e. a construct in which questions are developed in order to answer the content of the resulting summarized content of the AI with answers through its voice remote control function.

words

No. 3 The summarized content can be exchanged with friends in their streaming TV app for game answer question ratio and they can challenge their friends to a TV duel, using money or material objects that they have to claim or hand over in return, which was previously agreed upon before the game duel.

No. 4 From the questions generated about the sequences of the content of the AI summarized content examples and the answers of the players, we learn from them and the AI optimizes its search for TV sequences and TV experiences.

## ***No. 990 SmackThat***

By chance, the user, while streaming multimedia content while watching television, his activities of the content, especially vocals and their acoustics, of humans, machines, animals are recorded and examined under the new sound chip, which is connected to the microscope for examining chemical compounds, with the accompaniment of AI-supported instrumentals with the hope of arriving at new chemical formulas that could help the real world in various industries.  
to gain usefulness

## ***No. 991 Colorush***

We hear the connection of colors to objects and time with AI-created sequences to match the timeline shown.

Illustrations to study a connection between color, time, dimension in television, the findings of these connections we put in relation to the acquisition of theoretical connections in the chemical industry and economic industry in order to explore new functions in the creation of formulas for the sustainability of these industries

## **No. 992 RafyRast**

With a triple tap on a photo/video/text from What's app, an AI-generated text is added for the description and a similar photo or video matching your image from the free image/video library on the Internet is added as a small thumbnail in response to your photo. With a click on the mini thumbnail, an enlargement can be shown and displayed or suitable products that could match the photo purely visually or technically are also made available as a response as a mini preview or thumbnail. The thumbnails that are generated can be forwarded to other friends on your list and viewed.

## **No. 993 WonderSwan**

With the newly integrated function of the icon "WonderSwan" you give What's app the freedom to analyze your timeline for light, medium, heavy and important messages. This means that you click on the icon and the new screen shows you relevant summaries of topics and information from the timeline that you have had with a person, color-coded and categorized. You only have to select the date and a summarized topic appears with a category from the content of the time you could have chosen, from the multimedia content, see text, images, video, voice messages.

To do this, the AI helps you to provide the topic with new input of information from the Internet. The AI refers to free information sources and supports your topics with text, images, videos and individual voice messages.
